The Political Economy of Information Vincent Mosco, Janet Wasko, 1988 The information society is real Information as a marketable commodity is quickly taking up the powerful role once held by heavy industry and manufactured products How this revolution is affecting society and how society and government are responding to it is the subject of this book Its lessons and conclusions are of critical importance as we enter the last decade of this century Every dimension of social life whether in the home or the workplace is affected by information and the technologies that give it market value Along with the positive aspects of these broad changes there are inevitable problems the growing gap between

the information rich and information poor the need for widespread access to communication and information technology the threat to individual privacy and the potential of the technology to create global instabilities The editors have enlisted specialists and scholars in business communications studies computing and information science economics law library science political science and sociology to examine these changes and problems by looking at information specifically as a commodity to be traded protected and desired

Adaptive Information Processing Jeffrey R. Sampson, 2012-12-06 This book began as a series of lecture notes for a course called Introduction to Adaptive Systems which I developed for undergraduate Computing Science majors at the University of Alberta and first taught in 1973 The objective of the course has been threefold 1 to expose undergraduate computer scientists to a variety of subjects in the theory and application of computation subjects which are too often postponed to the graduate level or never taught at all 2 to provide undergraduates with a background sufficient to make them effective participants in graduate level courses in Automata Theory Biological Information Processing and Artificial Intelligence and 3 to present a personal viewpoint which unifies the apparently diverse aspects of the subject matter covered All of these goals apply equally to this book which is primarily designed for use in a one semester undergraduate computer science course I assume the reader has a general knowledge of computers and programming though not of particular machines or languages His mathematical background should include basic concepts of number systems set theory elementary discrete probability and logic

The Emergence of Artificial Cognition Peter Bock, 1993 An internationally recognized scientist presents his theories and associated technology for the coming generations of adaptive intelligent machines In this extraordinary book the pioneer of research in collective learning systems an adaptive learning paradigm for artificial intelligence describes the processes of cognition postulates a fundamental adaptive building block for assembling very large scale collective learning systems the learning cell and proposes a design for the ultimate machine a hierarchical network of 100 million learning cells that could exhibit the full range of cognitive capabilities of the human mind The author predicts that using the classical expert system approach to create such a vast knowledge base would require thousands of years to program all the rules As a feasible alternative he explains how a massive collective learning system could achieve this goal in about 20 years much as humans do Based on natural biological precedents a collective learning system acquires its knowledge through trial and error interaction with the real world To put it all in proper perspective the author introduces a theory of games for modeling the various processes of the universe presents a futuristic glimpse of the creation of the first artificially cognitive being and discusses the philosophical issues raised by the prospect of creating machines that exhibit human like cognition Two chapters are devoted to the design and evaluation of collective learning systems The final chapter presents the remarkable results of an on going international research project directed by the author a parallel processing collective learning system that simulates the sub symbolic adaptive vision functions of the brain
