Biological Complexity And Integrative Pluralism:

Biological Complexity and Integrative Pluralism Sandra D. Mitchell, 2003 **Unsimple Truths** Sandra D. Mitchell, 2009-12-15 The world is complex but acknowledging its complexity requires an appreciation for the many roles context plays in shaping natural phenomena In *Unsimple Truths* Sandra Mitchell argues that the long standing scientific and philosophical deference to reductive explanations founded on simple universal laws linear causal models and predict and act strategies fails to accommodate the kinds of knowledge that many contemporary sciences are providing about the world She advocates instead for a new understanding that represents the rich variegated interdependent fabric of many levels and kinds of explanation that are integrated with one another to ground effective prediction and action Mitchell draws from diverse fields including psychiatry social insect biology and studies of climate change to defend integrative pluralism a theory of scientific practices that makes sense of how many natural and social sciences represent the multi level multi component dynamic structures they study She explains how we must in light of the now acknowledged complexity and contingency of biological and social systems revise how we conceptualize the world how we investigate the world and how we act in the world Ultimately *Unsimple Truths* argues that the very idea of what should count as legitimate science itself should change

Rethinking Cancer Bernhard Strauss, Marta Bertolaso, Ingemar Ernberg, Mina J. Bissell, 2025-09-09 Leading scientists argue for a new paradigm for cancer research proposing a complex systems view of cancer supported by empirical evidence Current consensus in cancer research explains cancer as a disease caused by specific mutations in certain genes Thanks to dramatic advances in genome sequencing never before have we known so much about the individual cancer cell and yet it is still unclear how to use this knowledge for treatment success In this volume leading researchers argue for a new theory framework for understanding and treating cancer The contributors propose a complex systems view of cancer presenting conceptual building blocks for a new research paradigm supported by empirical evidence The contributors first discuss the new research framework in terms of theoretical foundations and then take up the relevance of a systems approach reviewing such topics as nonlinearity recurrence after treatment the cellular attractor concept network theory and noncoding DNA the dark matter of our genome They address the temporality of cancer progression drawing on evolutionary theory and clinical experience Finally they cover the dominant role of the tissue microenvironment in cancer analyzing topics including altered metabolic pathways the disease defining influence on metastasis and the interconnectedness of different environmental niches across levels of organization

What's Left of Human Nature? Maria Kronfeldner, 2018-10-16 A philosophical account of human nature that defends the concept against dehumanization Darwinian and developmentalist challenges Human nature has always been a foundational issue for philosophy What does it mean to have a human nature Is the concept the relic of a bygone age What is the use of such a concept What are the epistemic and ontological commitments people make when they use the concept In *What's Left of Human Nature* Maria Kronfeldner offers a philosophical account of human nature that defends the concept against contemporary criticism In particular she takes on challenges related to social misuse of the

concept that dehumanizes those regarded as lacking human nature the dehumanization challenge the conflict between Darwinian thinking and essentialist concepts of human nature the Darwinian challenge and the consensus that evolution heredity and ontogenetic development result from nurture and nature After answering each of these challenges Kronfeldner presents a revisionist account of human nature that minimizes dehumanization and does not fall back on outdated biological ideas Her account is post essentialist because it eliminates the concept of an essence of being human pluralist in that it argues that there are different things in the world that correspond to three different post essentialist concepts of human nature and interactive because it understands nature and nurture as interacting at the developmental epigenetic and evolutionary levels On the basis of this she introduces a dialectical concept of an ever changing and looping human nature Finally noting the essentially contested character of the concept and the ambiguity and redundancy of the terminology she wonders if we should simply eliminate the term human nature altogether
