## **Biotechnology And Plant Genetic Resources Conservation And Use:**

Biotechnology and Plant Genetic Resources J. A. Callow, Brian Ford-Lloyd, H. J. Newbury, 1997 Advances in molecular and cell biology have led to the development of a whole range of techniques for manipulating genomes collectively termed biotechnology Although much of the focus in the plant sciences has been on the direct manipulation of plant genomes biotechnology has also catalyzed a renewed emphasis on the importance of biological and genetic diversity and its conservation The methods of biotechnology now permit a greater understanding of both species and genetic diversity in plants the mechanisms by which that variation is generated in nature and the significance of that variation in the adaptation of plants to their environment They allow the development of rapid methods for screening germplasm for specific characters and promote more effective conservation strategies by defining the extent of genetic diversity Tissue culture based techniques are available for conserving germplasm that cannot be maintained by more traditional methods Also sophisticated informatics systems enable information on plant genetics and molecular biology to be cross related to systematic ecological and other data through international networks

**Conservation of Genetic Resources** Detlef Virchow, 1999-03-29 Over the past decade the importance of natural resources for sustainable agricultural development has been increasingly discussed at international forums and conferences Aside from the sustainable management of soil water and air it now seems to be accepted that the sustainable management of genetic resources is one of the four indispensable preconditions for a sustainable agriculture The discussion on conservation of plant genetic resources for food and agriculture PGRFA however has to reflect the costs of conservation as well These have not yet been discussed intensively The study analyzes the conservation costs of plant genetic resources it also assesses the effectiveness of conservation and the efficiency of the different conservation instruments It is based on extensive surveys in relevant countries Following the detailed cost and impact analysis the results show that the effectiveness of conservation strategies may be increased
