Utilisation of Excess Heat Towards a Circular Economy Sofia Päivärinne, 2017-11-23

In order to significantly lower the environmental impact from human activities numerous efforts and approaches related to the transformation of human activities have developed during the last decades Examples of such efforts are policies and strategies at different levels some with a top down approach focusing on extensive institutional changes and some with a bottom up approach focusing on industrial actors and industry led activities One essential aspect of these efforts concerns the energy used producing the products and services provided within our society This includes for example improved efficiency of processes in order to minimise the amount of energy used or optimisation of efficiency by using energy with the lowest possible exergy value It can also be about re use of energy which is the focus of this thesis Heat which is the main by product of all energy systems can be utilised for heating purposes to lower the primary energy demand for heating Increased utilisation of excess heat however requires collaboration between normally unrelated actors those with a supply of and those demanding excess heat In Sweden which is a Northern European country with high demand for heat the tradition of large energy intensive manufacturing industries generating large amounts of excess heat in combination with well established district heating distribution systems constitute good conditions for excess heat utilisation Despite the fact that Sweden is among the world leaders in utilising excess heat there is however still a large unutilised potential From this background the objective of this thesis is to identify challenges behind excess heat utilisation for heating purposes and to propose practical suggestions to facilitate expanded excess heat utilisation The overall objective is analysed with a focus on drivers and barriers behind interorganisational collaborations on excess heat utilisation important components of interorganisational business models and how the technical conditions regarding supply and demand could be facilitated by strategic municipal spatial planning processes The research is largely based on interviews conducted with societal actors with different perspectives on excess heat utilisation energy companies industries generating high grade excess heat facilities generating low grade excess heat facilities demanding low grade excess heat experts of utilisation of low grade excess heat branch organisations municipal spatial planners energy and climate advisors and developers Document studies have been conducted in order to collect case specific knowledge The research questions are explored based on literature studies on the principles of industrial symbiosis business model perspective and strategic planning Further they are examined in a Swedish context It is concluded that the three perspectives complement each other by providing a system perspective on increased utilisation of excess heat as they seek to contribute both environmental and financial benefits at both a company and societal level In order to facilitate further utilisation of excess heat it is important to focus on the organisational factors of humility honesty transparency trust fine grained information transfer joint problem solving and

shared visions of common goals which are important conditions behind development of functional and long term durable collaborations Business models for collaboration could contribute to the creation of these organisationally important conditions Such business models could also provide knowledge on how to create and capture joint values For some collaborations involving actors lacking the technical knowledge related to the capturing and distribution of excess heat a third party providing services related to the technical knowledge required could be beneficial Collaborations in which one of the actors consists of an energy company often entail the technical knowledge required This implies that different collaborations involving different types of actors and under different prevailing financial technical and organisational conditions require customised and flexible business solutions Local authorities could through their overall function initiate interorganisational collaborations on excess heat within the framework of municipal spatial planning The results do however show that the investigated planning processes could develop more extensive stakeholder participation to include further societal actors related to excess heat More extensive stakeholder participation have the potential to initiate new development of collaborations on excess heat between normally unrelated actors both with and without involvements of third party knowledge brokers A broader participation is also expected to result in increased knowledge on how to plan to further facilitate the condition of excess heat utilisation

The First City on Mars: An Urban Planner's Guide to Settling the Red Planet Justin B. Hollander, 2023-02-01 Hundreds of novels films and TV shows have speculated about what it would be like for us Earthlings to build cities on Mars To make it a reality however these dreamers are in sore need of additional conceptual tools in their belt particularly a rich knowledge of city planning and design Enter award winning author and Tufts University professor Justin Hollander In this book he draws on his experience as an urban planner and researcher of human settlements to provide a thoughtful exploration of what a city on Mars might

actually look like Exploring the residential commercial industrial and infrastructure elements of such an outpost the book is able to paint a vivid picture of how a Martian community would function the layout of its public spaces the arrangement of its buildings its transportation network and many more crucial aspects of daily life on another planet Dr Hollander then brings all these lessons to life through his own rendered plan for Aleph one of many possible designs for the first city on Mars Featuring a plethora of detailed cutting edge illustrations and blueprints for Martian settlements this book at once inspires and grounds the adventurous spirit It is a novel addition to the current planning underway to colonize the Red Planet providing a rich review of how we have historically overcome challenging environments and what the broader lessons of urban planning can offer to the extraordinary challenge of building a permanent settlement on Mars *Promoting Sustainable Innovation and the Circular Economy* Ole-Andreas Rognstad,Taina Pihlajarinne,Jukka Mähönen,2024-07-26 The book explores the role of public market actors in sustainable and circular economy innovation and financing The shift to a circular economy requires active innovation alongside radical changes in law finance and policy considerations since regulation is often tightly connected with the assumption of a linear model of consumption Finance is crucial in creating sustainable and circular economy markets and innovations public finance is important from the perspective of seeing the state as an engine for promoting sustainable innovations but private funds are also required Legislative initiatives for promoting repairs have been proposed or adopted in the EU US and in Australia representing remarkable steps forward but still leaving many obstacles without legislative intervention This book examines circular economy regulation and policy on a comprehensive general level as well as assessing the regulatory possibilities of promoting the right to repair Promotion of circular economy innovations as well as changing the practices and changing consumer patterns towards a more comprehensive adoption of CE are discussed from perspectives of legal social and moral norms The book critically evaluates current legislative reforms and assesses existing barriers to the circular economy and innovation in intellectual property law consumer law and competition law Providing an in depth analysis of this dynamic field geared towards reconsidering both existing and prospective policies and regulatory regime the book makes recommendations for solutions to legislative barriers It is an indispensable resource for both researchers and practitioners working at the intersections of markets innovations and sustainability Circular Economy for Buildings and Infrastructure Jian Zuo,Liyin Shen,Ruidong Chang,2024-05-03 This edited volume covers theoretical and practical aspects of circular economy in building development offering chapters dealing with topics such as material design affordability of housing development waste management and recycling smart metering and more A particular focus is placed on various stakeholders points of view The book s chapters are co developed and contributed by multidisciplinary teams including both academics and industry practitioners The case study oriented approach taken here helps to facilitate the reader s understanding of how building sustainability can be achieved in the context of circular economy The building industry has significant environmental social and economic impacts As one of the biggest

energy consumers and carbon emitters building sustainability has attracted wide attention globally Building projects and their associated activities consume a large amount of energy natural resources and water while producing a large proportion of wastes throughout their lifecycles The traditional linear approach of make use and dispose has been heavily criticized whilst the circular approach has gained momentum Indeed circular economy has emerged as one of key principles to manage sustainability related issues by means of focusing on the circularity of resources as well as the cost implications **The**

Basics of Modern Waste Management Harry Brooks, 2025-08-16 Waste management has emerged as a pressing concern in the context of urban development driven by the rapid growth of urban populations and the increasing complexity of waste generation As cities expand the volume and diversity of waste produced pose significant challenges that require innovative solutions and comprehensive management strategies This eBook aims to explore the intricacies of waste management within the framework of urban planning providing insights into the fundamental principles practices and emerging trends that shape this critical field The importance of effective waste management cannot be overstated It is not merely a logistical challenge it is a vital component of public health environmental sustainability and economic development Poor waste management can lead to a myriad of issues including pollution health hazards and diminished quality of life for urban residents Conversely well implemented waste management practices can enhance urban livability promote resource recovery and contribute to the overall resilience of cities In this eBook we will delve into various aspects of waste management beginning with an overview of its fundamentals in urban planning Subsequent chapters will explore topics such as the role of technology in waste management the importance of community engagement regulatory frameworks and the pursuit of zero waste goals Each chapter will provide a detailed examination of these topics offering practical insights and real world examples that illustrate the challenges and opportunities inherent in waste management As we navigate the complexities of waste management it is essential to recognize the interconnectedness of various stakeholders including government agencies private sector entities non profit organizations and community members Collaboration among these groups is crucial for developing effective waste management strategies that address local needs and promote sustainability By fostering partnerships and engaging communities urban planners can create more resilient and adaptive waste management systems The journey toward effective waste management is not without its challenges Urban planners must contend with issues such as limited space for waste disposal fluctuating waste generation rates and the need for public education on sustainable practices However these challenges also present opportunities for innovation and creativity As cities continue to evolve the potential for developing cutting edge waste management solutions that prioritize sustainability and resource recovery is immense This eBook is intended for urban planners policymakers students and anyone interested in understanding the critical role of waste management in shaping sustainable urban environments By providing a comprehensive overview of waste management principles and practices we hope to inspire readers to take action in their communities and contribute to

the development of effective waste management strategies As we embark on this exploration of waste management in urban planning it is essential to remember that the choices we make today will have lasting implications for future generations By prioritizing sustainable waste management practices we can create urban environments that are not only livable but also resilient equitable and environmentally responsible Together we can work toward a future where waste is minimized resources are conserved and urban communities thrive
