

Reproduction

	Advantages	Disadvantages
Internal fertilisation	- Fertilisation more likely to occur - Embryo protected from predators - Offspring more likely to survive	- Higher energy requirement to find mate - Less offspring produced - More energy required to raise and care for young
External fertilisation	- Little energy required to mate - Large numbers of offspring produced - Offspring can be spread widely = less competition	- Many gametes go unfertilised - Offspring often not protected by parents; many die
Asexual reproduction	- Energy efficient - Requires only 1 parent - No courtship required	- Low genetic diversity - More prone to environmental change - Inhibits adaptation
Sexual reproduction	- High genetic diversity - Less prone to environmental change - Facilitates adaptation	- Energy costly - Requires 2 parents - Courtship is time and resource consuming
