The Biology of Mangroves and

Seagrasses, 2007

Mangroves James N. Metras, 2011 Mangrove ecosystems are tropical or subtropical communities of mainly tree species which can be found on low muddy usually intertidal coastal areas They cover an area of approximately twenty million hectares throughout the world with the largest expanses occurring in Malaysia India Brazil Venezuela Nigeria and Senegal Mangrove communities are of great ecological importance due to the role they play as habitat builders and shoreline stabilisers They typically grow in saline coastal soils which develop through a combination of two processes mineral sediment deposition and organic matter accumulation This book presents topical research from across the globe in the study of mangroves including the eco biology of mangroves the mangrove ecosystem of Sundarbans India mangrove wetland ecosystem modelling in the Everglades and the microbial diversity from mangrove sediments *Biology and ecology of mangroves* H.J. Teas, 2013-04-17 *Mangrove Biology, Ecosystem, and Conservation*, 2023-11-22 Mangroves are considered the wonder flora distributed in the tropics subtropics and warm temperate latitudes Aside from protecting the coastal marine communities mangroves also serve as a haven for aquatic and terrestrial fauna actively participate in energy dynamics recycle nutrients filter waste and support the livelihood of coastal communities This makes the mangrove ecosystem crucial to the well being of the planet This book written by experts provides invaluable insights into mangroves of the Niger Delta the relationship between mangrove recruitment and thrombolytic development deforestation and sustainability mangrove health assessment ecosystem based coastal protection and conservation through ecotourism This book on mangrove biology ecosystem and conservation is an invaluable resource for every mangrove enthusiast **Diversity and Function in Mangrove Ecosystems** Richard Standiford, 2012-12-06 Mangroves are salt adapted plants that are found along many of the world's tropical and sub tropical coastlines Regrettably these plants are being lost due to over exploitation pollution conversion to agriculture and aquaculture and other causes This is having important consequences for local human populations that traditionally rely on this resource and is upsetting the fine balance needed to maintain this highly productive ecosystem This text brings together some papers from two recent international symposia on the mangrove ecosystem It provides an outline of future directions in mangrove research considered to be urgent by prominent mangrove scientists Contributions include aspects of population differentiation in mangrove species that have been very little studied so far ecological function and restoration and management of the mangrove ecosystem This book is intended for scientists actively working in the areas of mangrove ecology and management Mangroves: Biodiversity, Livelihoods and Conservation Sudhir Chandra Das, Pullaiah, Elizabeth C. Ashton, 2022-05-24 This contributory volume is a comprehensive collection on the mangrove forest eco system and its ecology the resources and potentials of mangroves conservation efforts mangrove ecosystem services and threats to conservation The book is an all inclusive compilation on the status conservation and future of mangroves Mangroves are a unique ecosystem providing several ecosystem services They are formed in the inter tidal areas

of large rivers and coastal islands Mangroves thrives due to constant interaction with the terrestrial and marine ecosystem These are the species dynamics varying tidal amplitudes plant succession changing floral pattern of the channels of the estuary the varying sediment transportation There was 20% decline in mangrove forest area in the last 25 years due mainly to conversion and coastal development Lengthy recovery periods required for the degraded mangrove forests Hence there is an urgent need to take stock of the updated information on these mangroves at global level It is of immense value to scientific community involved in teaching research and extension activities related to mangrove conservation
