Biochemistry Laboratory Techniques Wade Baskin, 1966

Fundamental Laboratory Approaches for Biochemistry and Biotechnology Alexander J. Ninfa, David P. Ballou, Marilee Benore, 2009-05-26

Ninfa Ballou Benore is a solid biochemistry lab manual dedicated to developing research skills allowing students to learn techniques and develop the critical thinking and organizational approaches necessary to conduct laboratory research. Ninfa Ballou Benore focuses on basic biochemistry laboratory techniques but also includes molecular biology exercises, a reflection of most courses which concentrate on traditional biochemistry experiments and techniques. The experiments are designed so that theory and technique are learned as fundamental research tools and the biochemistry and molecular biology applications are seamlessly integrated throughout the manual. The manual also includes an introduction to ethics in the laboratory uncommon in similar manuals. Most importantly perhaps is the authors' three pronged approach to encouraging students to think like a research scientist: first the authors introduce the scientific method and the hypothesis as a framework for developing conclusive experiments; second the manual's experiments are designed to become increasingly complex in order to teach more advanced techniques and analysis; finally gradually the students are required to devise their own protocols. In this way students and instructors are able to break away from a cookbook approach and to think and investigate for themselves. Suitable for lower level and upper level courses, Ninfa spans these courses and can also be used for some first year graduate work.
