Biological Actions Of Extracellular Atp:

Biological Actions of Extracellular ATP George R. Dubyak, Jeffrey S. Fedan, 1990 **Adenosine and Adenine**

Nucleotides: From Molecular Biology to Integrative Physiology Luiz Belardinelli, A. Pelleg, 2012-12-06 This book contains a selection of lectures given during the 5th International Symposium on Adenosine and Adenine Nucleotides recently held in Philadelphia Pennsylvania Adenosine and Adenine Nucleotides From Molecular Biology to Integrative Physiology covers a wide range of subjects from molecular and cellular biology to clinical applications A great emphasis has been placed on cutting edge information derived from studies using molecular and cellular biology techniques applied to the field of adenosine and adenine nucleotide research The book also includes information on potentially promising developments in the therapeutic applications of adenosine related drugs and ATP The tradition of past meetings is also maintained by including in the program presentations of new research in the areas of purine metabolism and physiology and pharmacology of adenosine and adenine nucleotides Adenosine and Adenine Nucleotides From Molecular Biology to Integrative Physiology is an excellent up to date reference book for basic and clinical scientists in the field of adenosine and adenine nucleotides

Adenosine and Adenine Nucleotides As Regulators of Cellular Function John W. Phillis, 2024-12-06 This book provides valuable information for investigators interested in the signaling and regulatory functions of adenosine and the adenine nucleotides Topics covered in this comprehensive volume include the historical development of research on adenosine and adenosine triphosphate various aspects of the formation metabolism release transport and receptors for endogenous adenosine and the adenosine triphosphate functions of purines at the cellular level the role of adenosine in the regulation of flow in different vascular beds and angiogenesis The book also addresses the purinergic regulation of the cardiac renal gastro intestinal and central nervous system as well as potential therapeutic avenues for purine use The book will be valuable to physiologists pharmacologists and other basic and clinical scientists interested in updating their knowledge of the expanding biological roles of these substances **International Review of Cytology** , 1995-05-12 International Review of Cytology presents current advances and comprehensive reviews in cell biology both plant and animal Articles address structure and control of gene expression nucleocytoplasmic interactions control of cell development and differentiation and cell transformation and growth Authored by some of the foremost scientists in the field each volume provides up to date information and directions for future research **P2 Purinoceptors** Derek J. Chadwick, Jamie A. Goode, 2008-04-30 Many different pathological conditions are currently under investigation as therapeutic targets of purines including cancer cardiovascular conditions behavioural disorders inflammation immunoregulation and neuroendocrine function This book draws together research on all aspects of P2 purinoceptors and discusses their use in different therapeutic areas *Cellular Biology of Ectoenzymes* Georg W. Kreutzberg, Martin Reddington, Herbert Zimmermann, 2012-12-06 Cells do not normally live as single entities but are grouped together in specific functional and

structural configurations in various tissues Intra cellular mechanisms maintain cellular viability and provide the means necessary for their specific cellular functions The interaction between cells is maintained by mechanisms involving extracellular signalling Such extracellular mechanisms may include special properties of the cell surface which involve immediate cell contact but may also represent mechanisms which act at a distance and are mediated via special secretions and or receptors Recent studies on cell cell contact have tended to stress cell surface components directly mediating cellular interactions the extracellular medium as a metabolically active compartment has been rather neglected However it represents a vital medium through which cells communicate being important in for example chemotaxis in primitive organisms and in development and in the coordination of multiple functions in multicellular organisms It is not surprising therefore that a number of molecular mechanisms have developed together with increasing biological complexity during evolution Two aspects of the extracellular space have received increasing attention in the last few years First several macromolecules such as collagen laminin and fibronectin have been identified as components of an extracellular matrix giving a structural dimension to the extracellular compartment
