This volume provides detailed methods on the mechanisms of underlying cancer cell biology Chapters guide readers through techniques for culturing cancer cell lines xenografts cryopreservation of tumor cells analyzing the co culture of breast cancer cells protein secretion by ELISA flow cytometry based multi parametric immunofluorescence analysis protein expression by western blot analysis of surface protein levels protein recycling by biotinylation assay and proteomics analysis by liquid chromatography mass spectrometry Written in the format of the highly successful *Methods in Molecular Biology* series each chapter includes an introduction to the topic lists necessary materials and reagents includes tips on troubleshooting and known pitfalls and step by step readily reproducible protocols Authoritative and cutting edge *Cancer Cell Biology Methods and Protocols* aims to provide a comprehensive set of tools for the analysis of cancer cell biology in the lab

Circulating Biomarkers in Patients with Head and Neck Cancer and the Influence of Cigarette Smoking Bengt-Åke Andersson, 2019-11-19

Head and neck cancer HNC is a collective name for heterogeneous tumors located in the head and neck regions for which smoking alcohol and human papillomavirus HPV are documented risk factors The survival of HNC patients has only improved marginally during the last decade The most important prognostic factors are tumor size local spread and distant metastases tumor node metastasis TNM staging Prognostic biomarkers are needed as a complement to TNM staging The aim for this thesis was to investigate rapid and low cost blood based biomarkers which could indicate the risk of HNC recurrence of the disease or the survival of HNC patients Furthermore the aim was to examine how cigarette smoking influences the levels of biomarkers In paper I a possible role of plasma cytokines or proteins associated with immune response or inflammation as biomarkers for the survival of HNC patients was investigated Higher levels of C reactive protein CRP and tumor necrosis factor alpha TNF were detected in plasma of the patients compared with the levels in the controls The elevated levels of these two biomarkers detected in patients were associated with decreased survival In paper II the influence of 45 single nucleotide polymorphisms SNPs located in 41 genes associated with cell cycle progression cell death DNA repair or immune response on cancer risk tumor recurrence and survival in HNC patients were investigated SNPs in immune response genes were associated with risk for HNC an elevated risk for recurrence and a decreased survival in HNC patients In paper III the influence of cigarette smoking on levels of inflammatory cells proteins or cytokines chemokines microRNAs miRNAs and SNPs was analysed in healthy smokers and non smokers Higher levels of total white blood cells WBCs neutrophils monocytes lymphocytes neutrophil to lymphocyte ratio NLR CRP monocyte chemoattractant protein 1 MCP 1 and interferon gamma IFN were detected in smokers compared to non smokers and indicate an inflammatory response Also a lower level of oncomiRNA miR 21 was detected in smokers This alteration in combination with the elevated levels of IFN in smokers could be a protective response to cigarette smoke The higher levels of IFN in smokers compared to non smokers were however only

detected in individuals with SNP rs2069705 genotype AG GG This indicates a genetic association of the levels of IFN In paper IV the separate effects of cigarette smoking and HNC on inflammatory or immune biomarkers and the impact of high risk human papillomavirus age and gender were investigated Comparisons of circulating levels of WBCs and its subpopulations plasma proteins or cytokines chemokines between smoking and non smoking patients smoking and non smoking controls and between the patient and control groups were analysed Smoking had highest impact on elevated levels of WBCs IFN and MCP 1 and HNC had highest impact on elevated levels of neutrophils monocytes NLR CRP macrophage inflammatory protein 1 beta and TNF In conclusion host immune response associated parameters could be suitable as biomarkers for the risk of HNC risk of recurrence or in predicting survival of HNC patients This thesis show that HNC are associated with systemic inflammatory response and upregulated CRP and TNF is related to shorter survival in HNC patients Additionally SNPs in immune response genes such as rs1800629 in the TNF gene indicates a risk for HNC or an elevated risk for recurrence and a decreased survival in HNC patients These rapid and low cost blood based biomarkers could be used in combination or as a supplement to established biomarkers in the clinic for a more personalized treatment modality

Huvud och halscancer HH cancer innefattar tumörer belägna i huvud och halsområdet Tobaksrökning kan öka risken dramatiskt för olika sjukdomar Knappt hälften av rökande patienter dör i de av rökning orsakade sjukdomarna Cancer är orsaken till en tredjedel av de rökrelaterade dödsfallen av vilka HH cancer är en En andel av patienterna med HH cancer dör på grund av att tumören varit för stor redan vid diagnos eller att tumören har spridit sig till viktiga delar av kroppen Men för många patienter är det mycket oklart vad som bestämmer behandlingsresultatet Tumörerna till synes lika och behandlingen standardiserad Men med denna doktorsavhandling var att undersöka billiga och lättillgängliga biologiska markörer som kan indikera risk för att drabbas av HH cancer eller om dessa markörer kan förutsäga behandlingsresultat och överlevnad hos de drabbade patienterna Dessutom undersöktes hur cigaretter påverkade nivåerna av markörerna I studie I undersöktes om molekyler i blodet biomarkörer förknippade med immunförsvaret kunde förutsäga överlevnaden hos HH cancerpatienter I jämförelse med friska individer sågs högre nivåer av molekylerna TNF och CRP hos patienterna och dessa förhållningar var relaterade till förkortad överlevnad hos patienterna I studie II var men att undersöka om variationer i gener förknippade med immunförsvaret celldelning celldöd eller enzymer som reparerar skadat DNA kunde påverka risk och prognos för HH cancer Resultatet visade framför allt att små genetiska variationer i gener som reglerar immunförsvaret kunde påverka risk för HH cancer risk för återfall i sjukdomen samt överlevnaden hos patienterna I studie III jämfördes inflammatoriska och immunförknippade biomarkörer som kunde påverkas av cigaretter mellan friska rökare och friska icke rökare Rökarna hade en högre inflammatorisk aktivitet med högre nivåer av totalt antal vita blodkroppar och tre av dess olika undergrupper neutrofiler monocyter och lymfocyter samt av biomarkörerna CRP MCP 1 och IFN De låga nivåerna av den cancerförknippade biomarkören miR 21 och högre nivåer av den förmodat skyddande biomarkören IFN hos rökarna kan vara ett uttryck för kroppens försvar mot den cancerframkallade cigaretterken genetiska

faktorer tycks kunna påverka de högre nivåerna av IFN hos rökarna eftersom kningen endast fanns i en grupp individer med viss typ av genetisk uppsättning. Eftersom både rökning och HH cancer ger upphov till inflammation undersöktes i studie IV hur dessa var för sig påverkade nivåerna av inflammatoriska biomarkörer. Detta för en bättre förståelse hur immunförsvaret reagerar på rökning och HH cancer. Jämförelser av inflammatoriska markörer från rökande och icke rökande patienter och rökande och icke rökande friska individer genomfördes. Rökning hade stark påverkan på de högre nivåerna av totalt antal vita blodkroppar och signalmolekylerna MCP 1 och IFN. HH cancer hade stark påverkan på de högre nivåerna av neutrofiler, monocyter, kvoten mellan neutrofiler och lymfocyter, CRP, MIP 1b och TNF. Uppkomsten av HH cancer, behandlingsresultat och överlevnad bland patienterna kan antas inte bara bero på tumörens egenskaper utan även på riskfaktorer hos patienten. Dessa kan vara arftliga eller bero på reglering av gener eller tumörens omgivning av till exempel immunceller och inflammatoriska molekyler och hur dessa samverkar med miljöfaktorer som tobaksrökning. I denna avhandling presenteras biomarkörer som kan bidra med information om risk och prognos för HH cancer samt hur tobaksrökning påverkar dessa markörer.

Understanding Biology Using Peptides Sylvie E. Blondelle, 2007-10-23 This book represents proceedings of the 19th American Peptide Symposium. It highlights many of the recent developments in peptide science with a particular emphasis on how these advances are being applied to basic problems in biology and medicine. Specific topics covered include novel synthetic strategies, peptides in biological signaling, post-translational modifications of peptides and proteins, and peptide quaternary structure in material science and disease.

Everyday Rituals Pearl Katz, 2024-08-06 When we are in painfully difficult or confusing life situations, especially amidst ever-uncertain times, our minds grapple for structure. A funeral ceremony definitively lays the dead to rest; the exaggerated choreography of a surgical room confirms its sterility; and a daily schedule gives prisoners a sense of normalcy. These practices, these rituals, give us peace. Though it might seem contradictory, ordered rituals actually bring us freedom, creativity, and mental well-being. Rituals aren't a thing of history or belonging to elaborate ceremonies, and they aren't even confined to the most painful or confusing of times. Rituals can be at a family dinner table or in a morning bathroom routine. In *Everyday Rituals*, Pearl Katz shows us just how transformative rituals are, no matter what kind. Unlike other titles on the subject in the self-help genre or in anthropological reportage, Katz applies her years of fieldwork and psychiatric study to tangible everyday American life. She writes a thoroughly persuasive argument using poignant case studies to truly inspire readers. Specific hormones flow and brain paths open when artists follow their creative regimen, and mental health increases in patients under hospital directive. In contrast, young people suffer stress in unbounded undergraduate hookup culture. And after the coronavirus ripped many rituals from American life, the ill effects of a life without routine burn bright. It is in the ordinary that Katz discovers unlimited potential: mundane routine actually sparks incredible imagination. With scientific evidence, case studies, personal narrative, and guiding wisdom, Katz enlightens us as to how and why we can feel true freedom.

Terrestrial Photosynthesis in a Changing Environment Jaume Flexas, Francesco Loreto, Hipólito Medrano, 2012-07-19

Understanding how photosynthesis responds to the environment is crucial for improving plant production and maintaining biodiversity in the context of global change. Covering all aspects of photosynthesis from basic concepts to methodologies from the organelle to whole ecosystem levels, this is an integrated guide to photosynthesis in an environmentally dynamic context. Focusing on the ecophysiology of photosynthesis, how photosynthesis varies in time and space, responds and adapts to environmental conditions and differs among species within an evolutionary context, the book features contributions from leaders in the field. The approach is interdisciplinary and the topics covered have applications for ecology, environmental sciences, agronomy, forestry, and meteorology. It also addresses applied fields such as climate change, biomass, and biofuel production and genetic engineering, making a valuable contribution to our understanding of the impacts of climate change on the primary productivity of the globe and on ecosystem stability.

Metallic Nanoparticles for Health and the

Environment Md Sabir Alam, Md Noushad Javed, Jamilur R. Ansari, 2023-10-16. *Metallic Nanoparticles for Health and the Environment* covers different routes of synthesis for metallic nanoparticles and their process variables. Both the functions and roles of these particles as a drug delivery system and diagnostic agent and other potential theranostic purposes against metabolic disorders, photocatalysis applications as well as wastewater treatments are discussed. The book compares the different properties of bulk metallic forms and their nanoparticulated forms. It discusses the mechanisms and impacts of different process variables in different synthesis routes as well as emerging trends in clinics and so forth. Features: Covers different routes of synthesis to create metallic nanoparticles. MNPs of different characteristics with reference to bulk forms of metals. Describes formulation parameters that have a significant effect on these MNPs including dimensions, morphology, mechanism, surface properties, and other characteristics. Discusses different roles and performances of MNPs in photothermal therapy, metabolic disorders, mechanisms in bacterial, fungal, and viral infections, and inflammatory pathways. Reviews the potential and emerging roles of different MNPs with site target delivery applications and genetic manipulation purposes. Examines the advantages and challenges of these MNPs against remediation of pollutants and toxicants owing to their superior surface catalytic activities. This book is aimed at researchers and professionals in nanomaterials, pharmaceuticals, and drug delivery.
