Biology Toxicology And Carcinogenesis Of Respiratory Epithelium:

Biology, Toxicology and Carcinogenesis of Respiratory Epithelium G. Thomassen,1989-12-01 This broadly based reference resource was compiled as a result of the rapid rise in lung cancer incidence among the world's industrialized nations Leading researchers address modern research on the respiratory epithelium **Airway Mucus: Basic**

Mechanisms and Clinical Perspectives D.F. Rogers,Michael Lethem,1997-09-23 Conceptually unsavoury airway mucus is vital to homeostasis in the respiratory tract In contrast when abnormal mucus contributes significantly to the pathophysiology of a number of severe bronchial diseases including asthma chronic bronchitis and cystic fibrosis This volume provides wide ranging and in depth coverage of the scientific and clinical aspects of airway mucus It commences with introductory chapters which address the biochemical and molecular biological basis of airway mucus and continues with comprehensive coverage of the various physiological and rheological aspects of respiratory secretions The clinical aspects of the topic are then considered with chapters discussing the involvement of mucus secretions in bacterial infection and in hypersecretory diseases of the airway The volume concludes with a discussion of the therapeutic aspects of the topic both in terms of the possible approaches to the treatment of mucus hypersecretion and the interaction of these drugs with airway mucus Written by leading experts in the field each contribution provides a comprehensive review of its particular subject Reflecting the latest advances in this important area of respiratory research this volume will be of great interest to scientists and clinicians working in the field of airway secretions and related areas **Information Resources in Toxicology** P.J.

Presents the broad outline of NIH organizational structure the professional staff and their scientific and technical publications covering work done at NIH *Mechanisms in Fibre Carcinogenesis* Robert C. Brown,John A. Hoskins,Neil F.

Johnson,2012-12-06 The Editors are sorry that the production of this volume was delayed by the ill health of one of them and

we hope that this does not detract from the value of the contents For once this delay is not the fault of any of the authors only the editors are to blame Many of the workers in the field of fibre toxicology became convinced by the middle 1980 s that the worst of the furore over asbestos was over although we were left with an intriguing problem how does asbestos cause disease It was expected that the future impact of fibres on human health would be very small since asbestos exposure would be controlled and there was little chance that man made fibres would prove hazardous These man made fibres are much thicker than asbestos and in most cases they are less durable in the body Both of these properties are believed to make them much less likely to cause disease However many of us had fallen into the habit of calling these materials asbestos substitutes and thus they have acquired a little of the notoriety attached to the natural fibrous minerals Very few of these man made fibres are actually used as replacements for asbestos Asbestos was not suitable for the uses to which the insulation wools are usually put and the ceramic fibres are replacements for fire brick not asbestos which is destroyed at the temperatures at which these materials are used

The Lung Kent Pinkerton, Richard Harding, 2014-10-23 The second edition of *The Lung* Development Aging and the Environment provides an understanding of the multifaceted nature of lung development aging and how the environment influences these processes As an essential resource to respiratory pulmonary and thoracic scientists and physicians it provides an interface between the normal and disease cluster of chapters allowing for a natural complement to each other The interface between different lung diseases affecting the pediatric lung also adds a useful source for comparing how different lung diseases share key pathophysiological features This same complementarity comes across in the logical line up of chapters dealing with the normal pediatric lung New research including cell based strategies for infant lung function epigenetics and prenatal alcohol exposure on lung development and function are some of the important additions to this edition of this reference work Describes the normal processes of lung development growth and aging Considers the effects of the environmental contaminants in the air water soil and diet on lung development growth and health Describes genetic factors involved in susceptibility to lung disease Covers respiratory health risk in children

Lung Growth and Development John A. McDonald, 2024-11-01 Reflects the explosion of information and technological breakthroughs that have facilitated investigations into the development of the lung including recombinant DNA technology molecular genetics transgenics and advances in lung cell and molecular biology Provides nearly 2800 bibliographic citations and over 170 tables drawings and x rays to help clarify specific discussions

IPCS Mode of Action Framework International Program on Chemical Safety, 2007 The use of structured frameworks in chemical risk assessment promotes transparent harmonized approaches This publication presents two IPCS frameworks originally published in Critical reviews in toxicology The frameworks provide a means of ensuring a transparent evaluation of the data identification of key data gaps and of information that would be of value in the further risk assessment of the chemical in question Publisher's description

Oncogene and Transgenics Correlates of Cancer Risk Assessments Constantine Zervos, 2012-12-06 The data the

information and even the overarching knowledge necessary for risk assessments of economically important environmental carcinogens come for the most part from the applied biological disciplines e g toxicology epidemiology biostatistics etc The more fundamental biological disciplines e g biochemistry cell biology molecular biology molecular genetics of cancer etc have enormous but unrealized potential to improve current cancer risk assessment methods The objective of this advanced research workshop ARW was to advance the state of the art of cancer risk assessment methods by identifying potential short and long term contributions to such methods from the more fundamental disciplines Attention was paid to short and long term contributions from research advances in the biochemistry and physiology of oncogenes oncogenes research and in the construction and utilization of transgenic animals transgenics research In the last 20 years researchers in the fundamental biological disciplines i e biochemists geneticists molecular and cell biologists etc have inter alia advanced spectacularly our understanding of the nature of neoplastic diseases Their phenomenal progress is the combined result of both advances and refinements of the techniques available to them and of new fundamental discoveries Among the latter the most significant are the discoveries of oncogenes and of the feasibility of creating transgenic animals i e of transferring well defined and expressible genes from the cells of one species of organisms to the embryonic cells of another **Pollution Abstracts** ,1991 Indexes material from conference proceedings and hard to find documents in addition to journal articles Over 1 000 journals are indexed and literature published from 1981 to the present is covered Topics in pollution and its management are extensively covered from the standpoints of atmosphere emissions mathematical models effects on people and animals and environmental action Major areas of coverage include air pollution marine pollution freshwater pollution sewage and wastewater treatment waste management land pollution toxicology and health noise and radiation
