# Must Our Approach to Research be Different?

- We don't really know what gives bone its exceptional properties--How do we construct something similar?
- We don't know how molecules find their three dimensional shape--How can we design selfassembling systems that depend on precise docking of components?

Biomolecular Materials by Design: Volume 330 Mark Alper, 1994-08-24 The MRS Symposium Proceeding series is an internationally recognised reference suitable for researchers and practitioners Nanotechnology: Science and Computation Junghuei Chen, Natasha Jonoska, Grzegorz Rozenberg, 2006-06-29 Nanoscale science and computing is becoming a major research area as today s scientists try to understand the processes of natural and biomolecular computing The field is concerned with the architectures and design of molecular self assembly nanostructures and molecular devices and with understanding and exploiting the computational processes of biomolecules in nature This book offers a unique and authoritative perspective on current research in nanoscale science engineering and computing Leading researchers cover the topics of DNA self assembly in two dimensional arrays and three dimensional structures molecular motors DNA word design molecular electronics gene assembly surface layer protein assembly and membrane computing The book is suitable for academic and industrial scientists and engineers working in nanoscale science in particular researchers engaged with the idea of computing at a molecular level Elastomeric Proteins Peter R. Shewry, Arthur S. Tatham, Allen J. Bailey, 2010-02-04 This book was originally published in 2002 Elastic proteins occur in a wide range of biological systems where they have evolved to fulfil precise biological roles The best known include proteins in vertebrate muscles and connective tissues such as titin elastin and fibrillin and spider silks However other examples include byssus and abductin from bivalve molluscs resilin from arthropods and gluten from wheat Interest in elastomeric proteins has been high for several reasons Firstly their biological and medical significance particularly in human disease Secondly the unusual properties of proteins such as spider silks provide opportunities to develop materials Thirdly the development of scanning probe microscopy makes it possible to study structures and biomechanical properties of these proteins at the single molecule level This book will be of value to anyone with an interest in the various aspects of elastomeric proteins Scientific and Technical Aerospace Reports, 1995

disciplines Chapters explore recombinant DNA technologies spinning of fibres and structure function relationships in spider silk Nano-Physics and Bio-Electronics T. Chakraborty, F. Peeters, U. Sivan, 2002-04-16 This book is a collection of some of the invited talks presented at the international meeting held at the Max Planck Institut fuer Physik Komplexer Systeme Dresden Germany during August 6 30 2001 on the rapidly developing field of nanoscale science in science and bio electronics Semiconductor physics has experienced unprecedented developments over the second half of the twentieth century The exponential growth in microelectronic processing power and the size of dynamic memorie has been achieved by significant downscaling of the minimum feature size Smaller feature sizes result in increased functional density faster speed and lower costs In this process one is reaching the limits where quantum effects and fluctuations are beginning to play an important role This book reflects the achievements of the present times and future directions of research on nanoscopic dimensions **Information Processing and** Living Systems Vladimir B. Baji?, Tin Wee Tan, 2005 Information processing and information flow occur in the course of an organism's development and throughout its lifespan Organisms do not exist in isolation but interact with each other constantly within a complex ecosystem The relationships between organisms such as those between prey or predator host and parasite and between mating partners are complex and multidimensional In all cases there is constant communication and information flow at many levels This book focuses on information processing by life forms and the use of information technology in understanding them Readers are first given a comprehensive overview of biocomputing before navigating the complex terrain of natural processing of biological information using physiological and analogous computing models The remainder of the book deals with artificial processing of biological information as a human endeavor in order to derive new knowledge and gain insight into life forms and their functioning Specific innovative applications and tools for biological discovery are provided as the link and complement to biocomputing Since artificial processing of biological information is complementary to natural processing a better understanding of the former helps us improve the latter Consequently readers are exposed to both domains and when dealing with biological problems of their interest will be better equipped to grasp relevant ideas
