Bionic Human:

Cyber-Humans Woodrow Barfield, 2015-12-17 It is predicted that robots will surpass human intelligence within the next fifty years. The ever increasing speed of advances in technology and neuroscience coupled with the creation of super computers and enhanced body parts and artificial limbs is paving the way for a merger of both human and machine. Devices which were once worn on the body are now being implanted into the body and as a result a class of true cyborgs who are displaying a range of skills beyond those of normal human beings are being created. There are cyborgs which can see colour by hearing sound, others have the ability to detect magnetic fields, some are equipped with telephoto lenses to aid their vision or implanted computers to monitor their heart and some use thought to communicate with a computer or to manipulate a robotic arm. This is not science fiction, these are developments that are really happening now and will continue to develop in the future. However a range of legal and policy questions has arisen alongside this rise of artificial intelligence. *Cyber Humans* provides a deep and unique perspective on the technological future of humanity and describes how law and policy will be particularly relevant in creating a fair and equal society and protecting the liberties of different life forms which will emerge in the 21st century. Dr Woodrow Woody Barfield previously headed up the Sensory Engineering Laboratory holding the position of Industrial and Systems Engineering Professor at the University of Washington. His research revolves around the design and use of wearable computers and augmented reality systems and holds both JD and LL.M degrees in intellectual property law and policy. He has published over 350 articles and major presentations in the areas of computer science engineering and law. He currently lives in Chapel Hill NC USA.

What will we invent now that AI exists? *AI and Developing Human Intelligence* will interest you, inform you and empower your understanding of intelligence and where we are going on the next part of our journey in understanding what it is to be human now and tomorrow.

Cyberculture, Cyborgs and Science Fiction William S. Haney, 2006 Addressing a key issue related to human nature, this book argues that the first person experience of pure consciousness may soon be under threat from posthuman biotechnology. In exploiting the mind's capacity for instrumental behavior, posthumanists seek to extend human experience by physically projecting the mind outward through the continuity of thought and the material world as

through telepresence and other forms of prosthetic enhancements Posthumanism envisions a biology machine symbiosis that will promote this extension arguably at the expense of the natural tendency of the mind to move toward pure consciousness As each chapter of this book contends by forcibly overextending and thus jeopardizing the neurophysiology of consciousness the posthuman condition could in the long term undermine human nature defined as the effortless capacity for transcending the mind s conceptual content Presented here for the first time the essential argument of this book is more than a warning it gives a direction far better to practice patience and develop pure consciousness and evolve into a higher human being than to fall prey to the Faustian temptations of biotechnological power As argued throughout the book each person must choose for him or herself between the technological extension of physical experience through mind body and world on the one hand and the natural powers of human consciousness on the other as a means to realize their ultimate vision **The Bionic**

only be found on the planet of humanity's birth. But nobody he knows has ever seen a ship that can sail to the stars the kind their forefathers arrived on. Eetoo is an orphan caring for the small flock of sheep he inherited from his parents. The only one he's close to is Venerable Too Dah who taught him to read the ancient tablets now tells him he must find his way to the planet of Humanity's birth and find the golden tablets that will complete their knowledge of truth. His own dreams also confirm it. But how. He unexpectedly meets someone who gives him a lift off his planet and his journey begins. On his search he discovers how evil the ancient humans were who first left Earth to colonise the stars. Though the ancient Nephteshi Human Empire is a thing of the past some alien species have painful memories of their atrocities and would rather see humanity extinct. The paradox keeps Eetoo searching for answers taking him to first century Earth. Other galactic species are more friendly to humanity and Eetoo gains the friendship of both humans and non humans including some romance. Think Ben Hur of Science Fiction. The parts of the narrative set on Earth are influenced by readings of first century history in light of the Dead Sea Scrolls the Pseudepigrapha Rabbinical sources as well as readings of Shalom Asch's The Nazarene. Some study of Quantum Mechanics also helped. Such a combination of rabbis Essenes and aliens could only exist in a historical space opera.
