Biotechnology Environmental Procebes I:

Environmental Biotechnology Hans-Joachim Jördening, Josef Winter, 2006-03-06 A deeper insight into the complex processes involved in this field covering the biological chemical and engineering fundamentals needed to further develop effective methodologies. The book devotes detailed chapters to each of the four main areas of environmental biotechnology. wastewater treatment soil treatment solid waste treatment and waste gas treatment dealing with both the microbiological and process engineering aspects The result is the combined knowledge contained in the extremely successful volumes 11a through 11c of the Biotechnology series in a handy and compact form Biotechnology, Environmental Processes I-III Jürgen Klein, Josef Winter, 2001-10-15 Environmental biotechnology a huge and fast growing field with increasing relevance for a sustainable development is covered in depth in the Biotechnology series When starting the Second Edition of Biotechnology one volume was planned to deal with processes of environmental biotechnology However it was realized soon that knowledge in this field has increased tremendously It has become too broad a field to be summarized with significance in a single book Now a set of three volumes on the topic is available Volumes 11 a c provide profound information on the biotechnology of wastewater on soil decontamination processes on the treatment of solid waste and off gas and on the preparation of drinking water Special emphasis is given to the description of processes and applications Biotechnology Lawrence K. Wang, Volodymyr Ivanov, Joo-Hwa Tay, Yung-Tse Hung, 2010-04-05 The past 30 years have seen the emergence of a growing desire worldwide that positive actions be taken to restore and protect the environment from the degrading effects of all forms of pollution air water soil and noise Since pollution is a direct or indirect consequence of waste production the seemingly idealistic demand for zero discharge can be construed as an unrealistic demand for zero waste However as long as waste continues to exist we can only attempt to abate the subsequent pollution by converting it to a less noxious form Three major questions usually arise when a particular type of pollution has been identified 1 How serious is the pollution 2 Is the technology to abate it available and 3 Do the costs of abatement justify the degree of abatement achieved This book is one of the volumes of the Handbook of Environmental Engineering series The principal intention of this series is to help readers formulate answers to the last two questions above The traditional approach of applying tried and true solutions to speci c pollution problems has been a major contributing factor to the success of environmental engineering and has accounted in large measure for the establishment of a methodology of pollution control However the realization of the ever increasing complexity and interrelated nature of current environmental problems renders it imperative that intelligent Biotechnology, Environmental Processes I Josef planning of pollution abatement systems be undertaken Winter, 1999-06-25 The first volume on environmental processes gives a profound overview on the biotechnology of wastewater Part I deals with general aspects such as microbial metabolism biofilms analytical techniques threshold values methods of monitoring and regulations Processes of wastewater treatment are presented in Part II providing a lot of practical information origins and composition of wastewater from municipal industrial and agricultural sources as well as aerobic and anaerobic processes in different types of reactors are described Biotechnology, Environmental Processes I Josef Winter, 1999-06-25 The first volume on environmental processes gives a profound overview on the biotechnology of wastewater Part I deals with general aspects such as microbial metabolism biofilms analytical techniques threshold values methods of monitoring and regulations Processes of wastewater treatment are presented in Part II providing a lot of practical information origins and composition of wastewater from municipal industrial and agricultural sources as well as aerobic and anaerobic processes in different types of reactors are described Biotechnology Hans-Jürgen Rehm, Gerald Reed, Josef BIOTECHNOLOGY - Volume I Horst W.
