Biological and Synthetic Polymer Networks O. Kramer, 2012-12-06 Biological and Synthetic Polymer Networks contains 36 papers selected from the papers presented at NETWORKS 86 the 8th Polymer Networks Group Meeting NETWORKS 86 was held in Elsinore Denmark on 31 August 5 September 1986 A total of nine invited main lectures and 68 contributed papers were presented at the meeting A wide range of important biological and synthetic materials consist of three dimensional polymer networks The properties range from very stiff structural materials to extremely flexible rubbery materials and gels Most polymer networks are permanent networks held together by covalent bonds Such networks are insoluble but they may swell considerably in good solvents Polymer networks held together by ionic bonds hydrogen bonds or so called entanglements are of a more temporary nature At long times they exhibit a tendency to flow and they are soluble in good solvents The paper by Professor Walther Burchard and his co workers Covalent Thermoreversible and Entangled Networks An Attempt at Comparison serves as a general introduction to polymer networks The book contains both theoretical and experimental papers on the formation characterisation and properties of polymer networks Two topics were given special sessions at the meeting namely Biological Networks and Swelling of Polymer Networks

Supramolecular Polymer Networks and Gels Sebastian Seiffert, 2015-04-06 The series Advances in Polymer Science presents critical reviews of the present and future trends in polymer and biopolymer science It covers all areas of research in polymer and biopolymer science including chemistry physical chemistry physics material science The thematic volumes are addressed to scientists whether at universities or in industry who wish to keep abreast of the important advances in the covered topics Advances in Polymer Science enjoys a longstanding tradition and good reputation in its community Each volume is dedicated to a current topic and each review critically surveys one aspect of that topic to place it within the context of the volume The volumes typically summarize the significant developments of the last 5 to 10 years and discuss them critically presenting selected examples explaining and illustrating the important principles and bringing together many important references of primary

literature On that basis future research directions in the area can be discussed Advances in Polymer Science volumes thus are important references for every polymer scientist as well as for other scientists interested in polymer science as an introduction to a neighboring field or as a compilation of detailed information for the specialist Review articles for the individual volumes are invited by the volume editors Single contributions can be specially commissioned Readership Polymer scientists or scientists in related fields interested in polymer and biopolymer science at universities or in industry graduate students
