

Biology and emotion

IB Learning Outcome: To what extent do cognitive and biological factors interact in emotion ?

- Psychologists have often been interested in the interaction between our physiological state and the emotions that we experience.
- The big question in the study of emotion and cognition is one of order. Does the physiological process cause the emotion or does the physiological process follow a subjective response to environmental stimuli.
- The physiological differences

Biology And Emotion:

Biology and Emotion Neil McNaughton, 1989-07-13 There have been rapid and important advances in all behavioural sciences in recent years. These advances have in one sense been very diverse and specialised sufficiently so for a scientist to quickly lose touch with the current concerns of even neighbouring researches but in some cases the developments have seemed also to be fundamental and perhaps convergent with implications across a range of disciplines. In either case there is a real and increasing need for scientists to communicate their discoveries and to a new generation of students in their own. Problems in the Behavioural Sciences is designed to meet this need. The books are by leading researchers and deal with problems or topics that are attracting a special current interest. The central subject matter is psychology but many of the issues will need to be pursued across existing and fluid boundaries between psychology and other behavioural sciences like physiology, pharmacology, sociology, ethology and linguistics. The central idea of this book is that biology and particularly evolution provides the best starting point for the study of emotion. In particular it is argued that all the conventional properties of emotion such as expression, feeling and motivation can be considered in a scientific manner and useful conclusions drawn therefrom. The major part of the book involves the application of this central idea to a wide variety of the phenomena of emotion. The resultant review should be useful as an undergraduate text and so explanations in the text are aimed at the non specialist. At the same time the specific conclusions drawn in the book should be of interest to all those who do research on emotion and particularly those who need a solid framework on which to base interdisciplinary studies. Biology and Emotion differs from the majority of books in the field in that it does not present a specific theory of emotion. The material covered is therefore more general than is often the case and has not been selected to support a particular point of view. It combines an organised yet atheoretical approach with coverage of both animal and human emotions. **The**

Psychology and Biology of Emotion Robert Plutchik, 1994 The importance of emotions in everyday life is the subject of this systematic study which presents students with a broad summary of 30 years of research and theory on emotion covering both contemporary and historical theories. **The Feeling Brain** Elizabeth Johnston, Leah Olson, 2015-05-12 A reader friendly

exploration of the science of emotion. After years of neglect by both mainstream biology and psychology the study of emotions has emerged as a central topic of scientific inquiry in the vibrant new discipline of affective neuroscience. Elizabeth Johnston and Leah Olson trace how work in this rapidly expanding field speaks to fundamental questions about the nature of emotion. What is the function of emotions? What is the role of the body in emotions? What are feelings and how do they relate to emotions? Why are emotions so difficult to control? Is there an emotional brain? The authors tackle these questions and more in this tasting menu of cutting edge emotion research. They build their story around the path breaking 19th century works of biologist Charles Darwin and psychologist and philosopher William James. James's 1884 article 'What Is an Emotion?' continues to guide contemporary debate about minds, brains and emotions while Darwin's treatise on 'The Expression of Emotions in

Animals and Humans squarely located the study of emotions as a critical concern in biology Throughout their study Johnston and Olson focus on the key scientists whose work has shaped the field zeroing in on the most brilliant threads in the emerging tapestry of affective neuroscience Beginning with early work on the brain substrates of emotion by such workers such as James Papez and Paul MacLean who helped define an emotional brain they then examine the role of emotion in higher brain functions such as cognition and decision making They then investigate the complex interrelations of emotion and pleasure introducing along the way the work of major researchers such as Antonio Damasio and Joseph LeDoux In doing so they braid diverse strands of inquiry into a lucid and concise introduction to this burgeoning field and begin to answer some of the most compelling questions in the field today How does the science of normal emotion inform our understanding of emotional disorders To what extent can we regulate our emotions When can we trust our emotions and when might they lead us astray How do emotions affect our memories and vice versa How can we best describe the relationship between emotion and cognition Johnston and Olson lay out the most salient questions of contemporary affective neuroscience in this study expertly situating them in their biological psychological and philosophical contexts They offer a compelling vision of an increasingly exciting and ambitious field for mental health professionals and the interested lay audience as well as for undergraduate and graduate students

Emotions as Bio-cultural Processes Birgitt Röttger-Rössler, Hans Jürgen Markowitsch, 2009-06-12

Emotions have emerged as a topic of interest across the disciplines yet studies and findings on emotions tend to fall into two camps body versus brain nature versus nurture *Emotions as Bio cultural Processes* offers a unique collaboration across the biological social divide from psychology and neuroscience to cultural anthropology and sociology as 15 noted researchers develop a common language theoretical basis and methodology for examining this most sociocognitive aspect of our lives Starting with our evolutionary past and continuing into our modern world of social classes and norms these multidisciplinary perspectives reveal the complex interplay of biological social cultural and personal factors at work in emotions with particular emphasis on the nuances involved in pride and shame A sampling of the topics

- 1 The roles of the brain in emotional processing
- 2 Emotional development milestones in childhood
- 3 Social feeling rules and the experience of loss
- 4 Emotions as commodities The management of feelings and the self help industry
- 5 Honor and dishonor societal and gender manifestations of pride and shame
- 6 Emotion regulation and youth culture
- 7 Pride and shame in the classroom

A volume of such wide and integrative scope as *Emotions as Bio cultural Processes* should attract a large cohort of readers on both sides of the debate among them emotion researchers social and developmental psychologists sociologists social anthropologists and others who analyze the links between humans that on the one hand differentiate us as individuals but on the other hand tie us to our socio cultural worlds
