Organism and Environment

Sonia E. Sultan, 2015 Over the past decade advances in both molecular developmental biology and evolutionary ecology have made possible a new understanding of organisms as dynamic systems interacting with their environments This innovative book synthesizes a wealth of recent research findings to examine how environments influence phenotypic expression in individual organisms ecological development or eco devo and how organisms in turn alter their environments niche construction A key argument explored throughout the book is that ecological interactions as well as natural selection are shaped by these dual organism environment effects This synthesis is particularly timely as biologists seek a unified contemporary framework in which to investigate the developmental outcomes ecological success and evolutionary prospects of organisms in rapidly changing environments Organism and Environment is an advanced text suitable for graduate level

students taking seminar courses in ecology evolution and developmental biology as well as academics and researchers in these fields

Canine and Feline Skin Cytology Francesco Albanese, 2025-09-26

The second edition of Canine and Feline Skin Cytology is the most comprehensive work on the subject. The book provides veterinary students and veterinarians with a diagnostic tool that is now essential in the interpretation of skin lesions. In addition, the very rich iconography including numerous histological images becomes a very useful tool also for pathologists. With more than 1500 clinical histopathological and cytological images and detailed text, it illustrates both inflammatory and neoplastic skin diseases with a 360 view. The new book contains 9 chapters, 4 more than the first edition, enriching the manuscript with chapters on new topics such as backgrounds and cell cytoarchitectures but above all including numerous skin tumors that were not present in the first edition. The first part of the book describes in detail the morphology of the cells that make up the skin and those that reach the skin tissue during inflammatory processes. The general part also describes the methods of sampling, preparation and staining of slides in order to obtain good quality preparations that are as representative as possible of the lesion to be studied. The special chapters on inflammatory and neoplastic diseases and related cytological pictures are the most important parts of the book and have been enriched with numerous new skin diseases, making the work more complete. The last chapter is dedicated to the cytological aspects observed in the course of skin metastases coming from internal organs or from the mammary gland. This book is an essential diagnostic tool for veterinary students and practitioners alike.
