Intellectual Property and Biotechnology Matthew Rimmer, 2008-01-01 Dr Rimmer's book is a marvellous introduction to a crucial topic of our time. He writes engagingly, provocatively and always with good humour. A highly technical and complex area of law has been reduced to clear descriptions and searching analysis. Truly this is an important book on an essential topic that will help define the ethics of a future that includes nothing less than the future of our species. From the foreword by the Hon Justice Michael Kirby AC CMG the High Court of Australia the author has done an excellent job by explaining the subject in an open and accessible manner. This book is a timely and very thought provoking analysis of patent law and biotechnology. The book is a unique theoretical contribution to the controversial public debate over commercialization of biological inventions; there is an extensive bibliography, a valuable resource for further reading. The book will be of prime interest to lawyers and patent attorneys, scientists and researchers, business managers and technology transfer specialists. *Journal of Intellectual Property Rights* Rimmer's book is highly recommended for anyone interested in the issues and debate related to biological inventions regardless of which side the reader is on. Stefan M Miller *Journal of Commercial Biotechnology* this book gives an excellent account of the most celebrated biotechnology cases from three continents and for this alone is to be thoroughly recommended. David Rogers *European Intellectual Property Review* Rimmer has put a great deal of thought and effort into this series of chapters. For those looking at how to reform direct and develop laws in relation to biotechnology this book is brimming with ideas, suggestions and recommendations of what to do next. Rebecca Halford Harrison *Chartered Institute of Patent Attorneys* an excellent introduction to a wide range of legal thinking in an increasingly controversial and relevant area to humankind. Sharon Givoni *Australian Intellectual Property Law Bulletin* Rimmer's new book is a timely and very thought provoking analysis of patent law and biotechnology and asks a very serious question: can a 19th century patent system adequately deal with a 21st century industry? Kate McDonald *Australian Life Scientist* This book documents and evaluates the dramatic expansion of intellectual property law to accommodate various forms of biotechnology from micro organisms, plants and animals to human genes and stem cells. It makes a unique theoretical contribution to the controversial public debate over the commercialization of biological inventions. The author also considers the contradictions between the Supreme Court of Canada rulings in respect of the Harvard oncomouse and genetically modified canola. He explores law, policy and practice in both Australia and New Zealand in respect of gene patents and non coding DNA. This study charts the rebellion against the European Union Biotechnology Directive particularly in respect of Myriad Genetics BRCA1 and BRCA2 patents and stem cell patent applications. The book also considers whether patent law will accommodate frontier technologies such as bioinformatics, haplotype mapping, proteomics, pharmacogenomics and nanotechnology. *Intellectual Property and Biotechnology* will be of prime interest to lawyers and patent attorneys, scientists and researchers, business managers and technology transfer specialists. *Biotechnology, IPRs, and Biodiversity*

Medury Bhaskara Rao, Manjula Guru, 2007 *Biotechnology IPRs and Biodiversity* discusses the background of the signing of the Convention on Biodiversity, examines the various articles of CBD and provides a detailed analysis on the Cartagena Protocol on Biodiversity while also dealing with the various meetings, discussions and treaties on the subject. Leading to a better understanding of this complex and complicated issue, especially from a developing country's point of view, this volume will serve equally students and scholars of international business law, strategic management, as well as lawyers, policy analysts and NGOs.

The NIH Catalyst, 2008 New Developments in Biotechnology: Public perceptions of biotechnology, 1987 Pharmaceutical and Biotech Patent Law David K. Barr, Daniel Louis Reisner, 2010 **Handbook of Agricultural Biotechnology, Volume 2** Charles Oluwaseun Adetunji, Julius Kola Oloke, 2024-04-02

Handbook of AGRICULTURAL BIOTECHNOLOGY The book provides a detailed examination of the application of nanobioherbicides that come from plants, including information on the different metabolites derived from numerous plants that could become bioherbicides. The book gives attention to weed plant physiology and chronicles the activities of nanobioherbicides on weeds during preliminary bioassays, pot assays in house screenings and during field trials. Furthermore, deep data is provided on the commercial potential of these nanobioherbicides derived from plants while toxicity assays are also highlighted. Other topics covered include documented patents on nanobioherbicides, the process involved in the registration of these novel products as nanobioherbicides for both conventional and organic farming, relevant information on the application of molecular techniques for improvement of nanobioherbicides such as genomics, proteomics, informatics, bioinformatics and chemoinformatics, details about the non-target effect of the nanobioherbicides. Highlighted too is information on the biochemical, enzymatic and ultrastructural effects of these nanobioherbicides as well as detailed information on the nutritional qualities of agricultural crops after nanobioherbicidal application.

Audience The book is a useful resource for a diverse audience including industrialists, food industry professionals, agriculturists, agricultural microbiologists, plant pathologists, botanists, microbiologists, biotechnologists, nanotechnologists, microbial biotechnologists, farmers, policymakers and extension workers.
