Figure 1

[Figure 1] The tilt cylinder design is changed on 600, 700 and 800 size M-Series loaders. The current design uses a different shaft, piston and nut and a tapered steel collar. The current shaft uses a 15 degree taper to transition down to a larger diameter threaded end. The tapered collar mates the new shaft to the new piston. The changes provide a stronger shaft and allow for a higher 1491 N•m (1100 ft-lb) nut torque for increased clamp load of the piston. The new shaft has an added round machining mark on the rod eye for easy identification when assembled. Early design parts are NLA.

* Current seal kits include the new larger diameter nut.

For the correct replacement parts of early design cylinders, measure the cylinder rod outside diameter and refer to the corresponding explanation and table.

When replacing a cylinder assembly that has a 1.625 inch shaft diameter, replace both cylinders. When replacing a shaft, head, or piston, install all of the individual parts listed below in both cylinder tubes as the new shaft will be 1.5 inch diameter.
