Brain And Values:

Brain and Values Karl H. Pribram, 2018-01-17 This 5th volume of the Appalachian Conference discusses how the brain processes information the role of memory and value and models of creativity It pursues aspects of cognitive neuroscience and behavioral neurodynamics such as the topic of values and quantum distributed processing in the brain *What We Value* Emily Falk, 2025-04-08 A neuroscientist reveals the hidden calculations that shape our daily decisions and how to make more fulfilling impactful choices in our work relationships and lives With so many competing priorities pulling us in different directions every day family friends work our health it can feel difficult to make decisions that are aligned with what we care about most Especially in the moment we often default to the immediate demand the path of least resistance the worn old habit we wanted to change In *What We Value* pioneering scholar Emily Falk reveals how we can transform our relationship with the daily decisions that define our lives opening pathways to make more purposeful fulfilling choices more successfully change our behavior and influence others to see differently by thinking like neuroscientists Drawing on her own award winning research Falk introduces readers to a new paradigm for understanding why we and those around us do what we do This is the value calculation the often subconscious mechanism by which the brain computes our everyday choices By learning how it works Falk shows we can learn to work more strategically with it whether we want to embrace new activities and behaviors connect more meaningfully with others or become more effective leaders in our organizations and communities With captivating stories of star comedians journalists sports legends and more Falk demonstrates how we can change what we think just by changing what we think about get less defensive by connecting with our core values and seed innovation by seeking out different perspectives Whether deciding on something as small as what to eat for lunch or as big as what career to pursue we can have more agency and flexibility than we might think *What We Value* is a groundbreaking guide to finding new possibilities in our choices and the lives we ultimately make with them *Understanding the Brain and Its Development* Harun K. M. Yusuf, 1992 The understanding of brain functions at the molecular level has been one of the greatest challenges for man Up to now the basis of its most important functions including the development of consciousness and personality and the mechanism of learning and memory remains unknown However the pace of discovery at the morphological cellular neurophysiological and molecular levels of brain functions has been quite rapid in the past decades Neuroscience has therefore been an over advancing and extremely fascinating field of research which has made a significant contribution to our understanding of brain structure chemistry and function This book gives a concise synopsis of our present day knowledge of the basic chemical principles of how the brain works and how the brain develops It is quite an intelligible approach to ordering the tremendous amount of knowledge accumulated so far in various research fields particularly neurochemistry Special emphasis has been given to the chemical language of many aspects of brain development as related to morphology and function The final part is devoted to the plasticity of the brain and the impact of malnutrition and

environment in early life on the development of mental functions Particularly valuable are the many references to original literature especially when controversial issues are discussed The book is well written in an easily understandable manner and would be of great help to all students and scientists interested in the extensive and demanding field of neuroscience *Your Brain Is (Almost) Perfect* Read Montague,2007-09-25 A fascinating introduction Steven Pinker to the science of decision making One of the leading thinkers in the computational neuroscience revolution offers a brilliant new perspective on the mind s decision making process Why do we make the choices we make How can science explain free will If our brains are like slow computers originally programmed for survival with goals like food water and sex why do we make choices that go against our own biological best interests Where do values come from What role do emotions play From how we decide what we consume to the romantic ethical and financial choices we make Read Montague guides readers through a new approach to the mind that is both entertaining and illuminating Hearings United States.
