

What is Grey Matter?

Grey matter is a vital component of the central nervous system, comprising neuronal cell bodies, dendrites, and synapses. It appears grey due to the lack of myelin, a fatty substance that typically imparts a white color.

Grey matter is found in the brain and spinal cord, and it plays a crucial role in information processing, cognition, and motor control.

Grey matter has an intricate structure that supports various functions, making it a key element in the orchestration of neural activities and cognitive processes within the human body.
