Kelleher, 2004-10-19 When the cattle borne sickness known as Mad Cow Disease first appeared in America in 2003 authorities were quick to assure the nation that the outbreak was isolated quarantined and posed absolutely no danger to the general public What we were not told was that the origins of the sickness may already have been here and suspected for a quarter of a century This illuminating expos of the threat to our nation s health reveals for the first time how Mad Cow Disease a k a Bovine Spongiform Encephalopathy has jumped species infecting humans in the form of Creutzfeldt Jakob Disease CJD and may be hidden in the enormous increase in the number of Alzheimer s cases since 1979 Detailing the history and biology of Mad Cow Disease Brain Trust discloses how an investigation into the mysterious deaths in a group of cannibals in a remote part of the world evolved into a research program in the United States that may have had unforeseen and frightening consequences The shocking questions examined include Have millions of Americans already been exposed to the prions known to cause Mad Cow Disease through years of eating tainted beef Does the epidemic of prion disease spreading like wildfire through the nation s deer and elk pose a threat to hunters and venison eaters Are the cattle mutilations discovered in the last 30 years part of a covert illegal sampling program designed to learn how far the deadly prions have spread throughout the nation s livestock and beef products Exposing the devastating truth about Mad Cow Disease and a new theory of the possible consequences of a little known government research program and the potential national health catastrophe that may be the result Brain Trust inoculates Americans with an effective cure the truth
