

Brain Dysfunction in Children: Etiology, Diagnosis and Management.

P. Black (Ed.), New York: Raven Press, 1981, pp. xviii + 302, \$47.60.

Yet another book on minimal brain dysfunction published after a conference. At least the editor has selected the papers and commissioned additional ones. The result is, inevitably, a mixture of the sophisticated and the banal. There is little evidence that present European critiques of the concept of MBD have yet influenced North American clinical practice or research. Readers of this journal will be interested to find that behavioural approaches to dealing with the problem of children labelled as MBD are recognized as the only ones with supporting evidence for their efficacy. In a brave chapter, Chapman reviews the evidence for both the rational and effectiveness of Doman-Delacato's "patterning" therapy and finds little to support their claims.

Who will join me in sponsoring a society for the promotion of conferences which will not be published as books?

Annual Progress in Child Psychiatry and Child Development: 1980.

S. Chess and A. Thomas (Eds), New York: Brunner/Mazel, 1980, pp. viii + 610, \$34.00.

For all practitioners without easy access to a comprehensive library, selections such as these undoubtedly permit access to original and, if the selection is good, influential papers in the field of child psychiatry. Twelve years of experience as editors result in a choice of 39 articles organized under 11 areas of interest. Studies in Europe are well represented. What are noticeable by their absence are studies of outcome of treatment, particularly of a behavioural, psychological orientation. Remembering the increasing output of such studies in 1979, this surely reflects the editors' bias rather than the lack of relevant studies. Hopefully, it does not reflect a move away from behaviour studies in the field of child psychiatry.
