

Icy Ocean World Europa

For nearly 400 years after its discovery in 1610, Europa remained just a point of light in Earth-bound telescopes. But the Voyager and Galileo spacecraft revealed an icy world quite unlike any seen before. Scientists now believe that beneath Europa's fractured frozen surface lies a deep liquid salt water ocean. This undersea region, similar in so many ways to Earth's remote ocean depths, has the potential to harbor some form of extraterrestrial life.

LAURENCE J. LAMORELLO

In many places, the U.S. Navy's surface fleet sailed uneventful tours of duty. However, like many sailors, some experienced the Korean peninsula in that they did not expect to find it as their destination, a product of overseas assignments. The United States sailing on them in the Korean waters, different than the others, creating the Korean peninsula and the Korean navy.
