

The composition of the Earth and its atmosphere and the processes occurring within them shape the Earth's surface and its climate.

Changing the movement of an object requires a net force to be acting on it.

Objects can affect other objects at a distance.

Organisms are organised on a cellular basis.

All material in the Universe is made of very small particles.

The Big Ideas Of Science

Our solar system is a very small part of one of millions of galaxies in the Universe.

The diversity of organisms, living and extinct, is the result of Evolution.

Genetic information is passed down from one generation of organisms to another.

The total amount of energy in the Universe is always the same but energy can be transformed when things change or are made to happen.

Organisms require a supply of energy and materials for which they are often dependent on or in competition with other organisms.

5 Big Ideas In Science
