The Making of a Neuromorphic Visual System Christoph Rasche, 2005-12-06 This book presents an approach to the construction of a visual system which is behaviorally computationally and neurally motivated The goal is to characterize the process of visual categorization and to find a suitable representation format that can successfully deal with the structural variability existent within visual categories The book reviews past and existent theories of visual object and shape recognition in the fields of computer vision neuroscience and psychology The entire range of computations is discussed as are region based approaches and are modeled with wave propagating networks A completely novel shape recognition architecture is proposed that can recognize simple shapes under various degraded conditions It is discussed how such networks can be used for constructing basic level object representations It is envisioned how those networks can be implemented using the method of neuromorphic engineering

Machine Vision E. R. Davies, 2004-12-22 In the last 40 years machine vision has evolved into a mature field embracing a wide range of applications including surveillance automated inspection robot assembly vehicle guidance traffic monitoring and control signature verification biometric measurement and analysis of remotely sensed images While researchers and industry specialists continue to document their work in this area it has become increasingly difficult for professionals and graduate students to understand the essential theory and practicalities well enough to design their own algorithms and systems This book directly addresses this need As in earlier editions E R Davies clearly and systematically presents the basic concepts of the field in highly accessible prose and images covering essential elements of the theory while emphasizing algorithmic and practical design constraints In this thoroughly updated edition he divides the material into horizontal levels of a complete machine vision system Application case studies demonstrate specific techniques and illustrate key constraints for designing real world machine vision systems Includes solid accessible coverage of 2 D and 3 D scene analysis Offers thorough treatment of the Hough Transform a key technique for inspection and surveillance Brings vital topics and techniques together in an integrated system design approach Takes full account of the requirement for real time processing in real applications
