Astronomy On Ice:

Astronomy on ice J.D. Shanklin, 1997 Astronomy on Ice Martin A. Pomerantz, 2004 The story begins in 1930 with a Tenderfoot Boy Scout's first contact within hailing distance of Commander Richard Byrd and Eagle Scout Paul Siple both seated in the back of an open limousine in a ticker tape parade through Brooklyn honoring their return from their first trip to Antarctica The story ends with the author's final observing campaign at South Pole Station in 1994 and the dedication of the Martin A Pomerantz Observatory by the Directors of the National Science Foundation and its Office of Polar Programs The narrative is not strictly autobiographical but it does unfold through events and personal choices of the author along with the history of the science the evolution of the cutting edge astrophysical enterprise that is the centerpiece of the research program at the U S Amundsen Scott South Pole Station From his first taste of physics to his last trip to the South Pole Astronomy on Ice presents at a level aimed at an educated public the scientific research the author carried out over 50 years concentrating on his efforts to arouse interest within the astronomical community in the unique scientific resource offered by the South Pole In the face of the initially cool reception of his idea he conducted a number of experiments first bootlegged and later sanctioned with outstanding U S and foreign collaborators in multiple fields solar astronomy submillimeter astronomy ultra high energy cosmic ray and gamma ray astronomy and millimeter measurements of the microwave cosmic background radiation These experiments proved the singular advantages of working at the South Pole for each of these astrophysical subfields With instruments on the ground on ships aircraft aboard balloons and even on an early satellite the author's cosmic ray research carried him to the sub polar and north polar regions as well as to many other sites around the earth These experiences led to his initial Antarctic research in 1960 when he established the first year round cosmic ray detector at McMurdo Station In his initial visit to South Pole during the first of 26 austral summers in Antarctica the author recognized a number of potential advantages of this unique site for certain types of astronomical observations Although preliminary tests published in Polar Research A Survey in 1970 by the National Academy of Sciences Polar Research Board supported the idea it was not until 1979 after numerous rebuffs that the first authorized solar astronomy experiment proved that South Pole was the best site in the world for the new field of solar seismology probing the sun's heretofore invisible interior by listening to its ringing Collaborating with both domestic and foreign experts Pomerantz then conducted first time campaigns in other subfields of astronomy each revealing that South Pole was better than anyplace else on earth for conducting their specific types of astrophysical research Paradoxically manifold advantages stem from working at the earth's remote rotational axis atop the extremely cold and forbidding 9300 feet deep polar ice cap at a pressure altitude of about 12 000 feet The scope of fundamental problems studied at South Pole ranges from the nature of earth's electromagnetic environment to conditions throughout the sun's atmosphere and interior to stellar evolution to exotic physical processes in and beyond our galaxy to the beginning of structure in the Universe after its birth in the Big Bang **Ice Formation**

Howard Turner Barnes,1906 **The International Cometary Explorer (ICE) Wallsheet** Stephen P. Maran,1985 Ice Claw David Gilman,2010-10-12 The second novel in David Gilman's supercharged sophisticated Danger Zone series perfect for fans of Anthony Horowitz James Patterson and the Jason Bourne movies High in the freezing French Pyrenees Max Gordon's race to win an extreme sports challenge has become a race for survival He witnesses the last moments of a mysterious Basque monk who screams a cryptic clue before plummeting to his death The clue A prophecy that foretells a cataclysmic ecological event that will kill millions of people across Europe Max is desperate to find a solution but instead he's accused of causing the monk's death and the hunt is on to find him How can Max prove his innocence when nobody will trust him and when he can trust no one *The Cause of an Ice Age* Sir Robert Stawell Ball,1897 **Ice Trilogy** Vladimir Sorokin,2011-04-20 A New York Review Books Original In 1908 deep in Siberia it fell to earth THEIR ICE A young man on a scientific expedition found it It spoke to his heart and his heart named him Bro Bro felt the Ice Bro knew its purpose To bring together the 23 000 blond blue eyed Brothers and Sisters of the Light who were scattered on earth To wake their sleeping hearts To return to the Light To destroy this world And secretly throughout the twentieth century and up to our own day the Children of the Light have pursued their beloved goal Pulp fiction science fiction New Ageism pornography video game mayhem old time Communist propaganda and rampant commercial hype all collide splinter and splatter in Vladimir Sorokin's virtuosic Ice Trilogy a crazed joyride through modern times with the promise of a truly spectacular crash at the end And the reader as eager for the redemptive fix of a good story as the Children are for the Primordial Light has no choice except to go along caught up in a brilliant illusion from which only illusion escapes intact *Astronomy's Limitless Journey* Günther Hasinger,2015-10-31 When observing the sky on a very clear dark night the soft glow of the Milky Way with its thousands of stars can be seen with the naked eye Over the centuries since Galileo Galilei first pointed a telescope at the galaxy in 1609 this awe inspiring yet easily visible panorama was our cosmos our celestial world With each new scientific discovery however this cosmos has grown dramatically increasing rapidly over the last several decades As we look deeper into space the earlier phases of the cosmos are unveiled to us but we know that even with the largest telescopes we will see only a tiny fraction of the vast expanse of the universe In Astronomy's Limitless Journey astrophysicist Günther Hasinger takes the reader on a journey to the far reaches of the universe an exciting time travel that begins with the incredibly hot fireball of the Big Bang roughly 13.8 billion years ago and ends in distant eons with its cold dark demise In between lie the times in which extensive structures galaxies stars and planets form As the field of astrophysics and cosmology experiences a golden age due to larger telescopes faster computers and more sophisticated algorithms fundamental changes are taking place in our understanding of space and time and of the origin and future of our universe Hasinger thoroughly explains these fascinating revelations and describes the methods utilized in modern astrophysics He cautions however that the boundaries between knowledge and ignorance shift constantly where our knowledge is so incomplete such that we can only speculate the journey becomes shaky

Indeed every new discovery opens a further door to the unknown and with every answered question we discover more locked doors still to be opened

Ice Ages and Astronomical Causes Richard A. Muller, Gordon J. MacDonald, 2002-08-26 It is not possible to understand the present or future climate unless scientists can account for the enormous and rapid cycles of glaciation that have taken place over the last million years and which are expected to continue into the future A great deal has happened in the theory of the ice ages over the last decade and it is now widely accepted that ice ages are driven by changes in the Earth's orbit The study of ice ages is very interdisciplinary covering geology physics glaciology oceanography atmospheric science planetary orbit calculations astrophysics and statistics

The Telescope in the Ice Mark Bowen, 2017-11-14 The IceCube Observatory has been called the weirdest of the seven wonders of modern astronomy by Scientific American In The Telescope in the Ice Mark Bowen tells the amazing story of the people who built the instrument and the science involved Located near the U S Amundsen Scott Research Station at the geographic South Pole IceCube is unlike most telescopes in that it is not designed to detect light It employs a cubic kilometer of diamond clear ice more than a mile beneath the surface to detect an elementary particle known as the neutrino In 2010 it detected the first extraterrestrial high energy neutrinos and thus gave birth to a new field of astronomy IceCube is also the largest particle physics detector ever built Its scientific goals span not only astrophysics and cosmology but also pure particle physics And since the neutrino is one of the strangest and least understood of the known elementary particles this is fertile ground Neutrino physics is perhaps the most active field in particle physics today and IceCube is at the forefront The Telescope in the Ice is ultimately a book about people and the thrill of the chase the struggle to understand the neutrino and the pioneers and inventors of neutrino astronomy
