Asymmetry In Morphology:

Asymmetry in Morphology Anna Maria Di Sciullo, 2005-11-04 In this groundbreaking monograph Anna Maria Di Sciullo proposes that asymmetry the irreversibility of a pair of elements in an ordered set is a hard wired property of morphological relations Her argument that asymmetry is central in derivational morphology would if true make morphological objects regular objects of grammar just as syntactic and phonological objects are This contrasts with the traditional assumption that morphology is irregular and thus not subject to the basic hard wired regularities of form and interpretation Di Sciullo argues that the asymmetric property of morphological relations is part of the language faculty She proposes a theory of grammar Asymmetry Theory according to which generic operations have specific instantiations in parallel derivations of the computational space She posits that morphological and syntactic relations share a property asymmetry but diverge with respect to other properties of their primitives operations and interface representations Di Sciullo offers empirical support for her theory with examples from a variety of languages including English Modern Greek African Romance Turkish and Slavic

Asymmetry in Grammar Anna Maria Di Sciullo, 2003-03-20 Asymmetry in Grammar Morphology Phonology and Acquisition presents evidence that asymmetry as a property of linguistic relations is salient in grammar The papers in morphology bring further evidence for the centrality of asymmetry in word structure It is shown that asymmetry is part of the internal structure of functional constructs such as determiners and complementizers as it is the case for lexical constructs Further evidence is presented for the asymmetry of prefixes in verb structure A typology of formal objects based on the distinction between maximal and minimal categories is formulated It is proposed that Formal Complexity drives the change from synthetic to analytic expressions The papers in phonology point to the fact that asymmetry is part of that linguistic dimension in terms of processes that eliminates symmetric relations in terms of head dependency relations in terms of relative scope of the distinctive features in any inventory in terms of universal principles in combination with certain language specific choices Moreover the papers on acquisition bring to fore experimental data that point to the same direction The asymmetry of grammatical relations provides the form of the initial state of language that enables the child to cope with the poverty of the stimulus The collection includes papers in morphology by Anna Maria Di Sciullo Angela Ralli R Jean Canac Marquis Abdelkader Fassi Fehri papers in phonology by Eric Raimy Harry van der Hulst and Nancy Ritter Glyne Piggott Charles Reiss Elan Dresher and papers in acquisition from Maria Louisa Rivero and Magdalena Golezinowska and David Lebeaux

The Oxford Handbook of Compounding Rochelle Lieber, Pavol Stekauer, 2011-07-07 This book presents a comprehensive review of theoretical work on the linguistics and psycholinguistics of compound words and combines it with a series of surveys of compounding in a variety of languages from a wide range of language families Compounding is an effective way to create and express new meanings Compound words are segmentable into their constituents so that new items can often be understood on first presentation However as keystone keynote and keyboard and breadboard sandwich

board and mortarboard show the relation between components is often far from straightforward The question then arises as to how far compound sequences are analysed at each encounter and how far they are stored in the brain as single lexical items The nature and processing of compounds thus offer an unusually direct route to how language operates in the mind as well as providing the means of investigating important aspects of morphology and lexical semantics and insights to child language acquisition and the organization of the mental lexicon This book is the first to report on the state of the art on these and other central topics including the classification and typology of compounds and cross linguistic research on the subject in different frameworks and from synchronic and diachronic perspectives

Research Into Spinal Deformities 6 International Research Society of Spinal Deformities. Meeting, 2008 Meeting held on July 2 9 2008 in Liverpool England *UG and External Systems* Anna-Maria Di Sciullo, 2005-01-01 This book explores the interaction of the grammar with the external systems conceptual intentional and sensori motor The papers in the Language section include configurational analyses of the interface properties of depictives clitic clusters imperatives conditionals clefts as well as asymmetries in the structure of syllables and feet The Brain section discusses questions related to human learning and comprehension of language the acquisition of compounds the acquisition of the definite article the subject object asymmetry in the comprehension of D Linked vs non D linked questions the evidence for syntactic asymmetries in American Sign Language the acquisition of syllable types and the role of stress shift in the determination of phrase ending The papers in the Computation section present different perspectives on how the properties of UG can be implemented in a parser

implementations of different theories including configurational selection incorporation and minimalism and the role of statistical and quantitative approaches in natural language processing Deconstructing Constructions Christopher S. Butler, Javier Martín Arista, 2009-01-14 This collection of papers brings together contributions from experts in functional linguistics and in Construction Grammar approaches with the aim of exploring the concept of construction from different angles and trying to arrive at a better understanding of what a construction is and what roles constructions play in the frameworks which can be located within a multidimensional functional cognitive space At the same time the volume has a historical dimension for instance in plotting the developments which led to recent models The book is organised in three sections the first deals with particular theoretical issues the second is devoted to the recent Lexical Constructional Model and the third presents a number of analyses of specific constructions The volume thus makes an important contribution to the ongoing debate about the relationship between functionalist and constructionist models *Plasticity in Sensory Systems* Jennifer K. E. Steeves, Laurence R. Harris, 2013 Plasticity is a fundamental property of neural development and learning in living organisms It also contributes to problems associated with aging and degenerative processes Understanding neural plasticity has huge implications for those seeking to recover from brain injury or sensory deprivation and regular folk vying to improve their skills and ability Centered on three themes this book explores the latest research in plasticity in sensory systems with a focus primarily on visual and auditory systems It covers a breadth of recent scientific study within the field including research on healthy systems and diseased models of sensory processing Topics include visual and visuomotor learning models of how the brain codes visual information sensory adaptations in vision and hearing as a result of partial or complete visual loss in childhood plasticity in the adult visual system and plasticity across the senses as well as new techniques in vision recovery rehabilitation and sensory substitution of other senses when one sense is lost This unique edited volume the fruit of an International Conference on Plastic Vision held at York University Toronto will provide students and scientists with an overview of the ongoing research related to sensory plasticity and perspectives on the direction of future work in the field New Trends in Software Methodologies, Tools and Techniques Hamido Fujita, Mohamed Mejri, 2005 Presents trends and theories in the direction in which we believe software science and engineering may develop to transform the role of software and science in information society This series contributes to elaborate on such trends and related academic research studies and development Roots and Patterns Maya Arad, 2005-11-27 This book is simultaneously a theoretical study in morphosyntax and an in depth empirical study of Hebrew Based on Hebrew data the book defends the status of the root as a lexical and phonological unit and argues that roots rather than verbs or nouns are the primitives of word formation A central claim made throughout the book is the role of locality in word formation teasing apart word formation from roots and word formation from existing words syntactically semantically and phonologically The book focuses on Hebrew a language with rich verb morphology where both roots and noun and verb creating morphology are

morphologically transparent The study of Hebrew verbs is based on a corpus of all Hebrew verb creating roots offering for the first time a survey of the full array of morpho syntactic forms seen in the Hebrew verb While the focus of this study is on how roots function in word formation a central chapter studies the information encoded by the Hebrew root arguing for a special kind of open ended value bounded within the classes of meaning analyzed by lexical semanticists
