At The Fringes Of Experience:

Fringes of Religious Experience Sergio Francese, Felicitas Kraemer, 2013-05-02 William James's *Varieties of Religious Experience* is one of the most renowned works of the famous psychologist and founder of pragmatism and a fully accomplished anthropological analysis of the phenomenon of religion. In this book a selection of 10 papers from international scholars previously presented at the International Centenary Conference in Celebration of The Gifford Lectures at University of Edinburgh in 2002 explore the theoretical and historical fringes of James's work in the attempt to provide new insights into some major issues involved therein. The book is divided into two parts. The first part deals with important philosophical and psychological issues related to James's account of religious experience. A second shorter section lays a focus on the historical sources and reception of James's ideas in American and European culture.

Structuring Mind Sebastian Watzl, 2017-03-09 What is attention? How does attention shape consciousness? In an approach that engages with foundational topics in the philosophy of mind, the theory of action psychology and the neurosciences, this book provides a unified and comprehensive answer to both questions. Sebastian Watzl shows that attention is a central structural feature of the mind. The first half of the book provides an account of the nature of attention. Attention is prioritizing; it consists in regulating priority structures. Attention is not another element of the mind but constituted by structures that organize, integrate and coordinate the parts of our mind. Attention thus integrates the perceptual and intellectual, the cognitive and motivational and the epistemic and practical. The second half of the book concerns the relationship between attention and consciousness. Watzl argues that attentional structure shapes consciousness into what is central and what is peripheral. The center-periphery structure of consciousness cannot be reduced to the structure of how the world appears to the subject. What it is like for us thus goes beyond the way the world appears to us. On this basis a new view of consciousness is offered. In each conscious experience we actively take a stance on the world we appear to encounter. It is in this sense that our conscious experience is our subjective perspective.

Education at the Edge of Experience Marla Morris, 2024-06-03 Presenting a unique exploration of education at the edge of experience, this book investigates how unassimilable concepts can reconceptualize education in order to grapple with what is beyond understanding. Working at the intersection of curriculum theory, philosophy and psychoanalysis, Morris examines how each of these unassimilable concepts such as lament, disavowal, breathlessness and the Kafkaesque point toward curriculum as the edge of experience. It addresses what Lee Braver calls the groundless grounds and what Avital Ronell calls the quicksand that is philosophy to approach slippage and breaking points through an interdisciplinary lens. Pointing to an understanding of our largely social ills and extending William F. Pinar's early work on curriculum in new and innovative directions, this book will appeal to curriculum theorists, education philosophers, psychoanalysts and those with interests in the philosophy and theory of education.

The World in Which We Occur Neil W. Browne, 2007-10-31 Understanding our environment. American philosopher John Dewey considered all human endeavors to

be continuous with the natural world In his writings particularly *Art as Experience* 1934 Dewey insists on the primacy of the environment in aesthetic experience Dewey's conception of environment includes both the natural and the man made Neil Browne highlights this notion in order to define what he terms pragmatist ecology a practice rooted in the interface of the cultural and the natural which he finds to be a significant feature of some of the most important ecological writing of the last century To fully understand human involvement in the natural world Browne argues disciplinary boundaries must be opened up This is primarily important between the arts and science with profound implications for the practice of democracy The degradation of the physical environment and democratic decay for Browne are rooted in the same problem our persistent belief that humans are somehow separate from their physical environment Browne probes the work of a number of major American writers through the lens of Dewey's philosophy Among other texts he examines John Muir's *My First Summer in the Sierra* 1911 *Sea of Cortez* 1941 by John Steinbeck and Edward Ricketts Rachel Carson's three books about the sea *Under the Sea Wind* 1941 *The Sea Around Us* 1951 and *The Edge of the Sea* 1955 John Haines's *The Stars the Snow the Fire* 1989 Tarry Lopez's *Arctic Dreams* 1986 and Terry Tempest Williams's *Refuge* 1991 Together these texts with their combinations of scientific observation and personal meditation challenge the dichotomies to which we've become accustomed and affirm the values of a pragmatist ecology one in which ecological and democratic values go hand in hand

The Oxford Companion to Consciousness Tim Bayne, Axel Cleeremans, Patrick Wilken, 2009 Consciousness is undoubtedly one of the last remaining scientific mysteries and hence one of the greatest contemporary scientific challenges How does the brain's activity result in the rich phenomenology that characterizes our waking life Are animals conscious Why did consciousness evolve How does science proceed to answer such questions Can we define what consciousness is Can we measure it Can we use experimental results to further our understanding of disorders of consciousness such as those seen in schizophrenia delirium or altered states of consciousness These questions are at the heart of contemporary research in the domain Answering them requires a fundamentally interdisciplinary approach that engages not only philosophers but also neuroscientists and psychologists in a joint effort to develop novel approaches that reflect both the stunning recent advances in imaging methods as well as the continuing refinement of our concepts of consciousness In this light the *Oxford Companion to Consciousness* is the most complete authoritative survey of contemporary research on consciousness Five years in the making and including over 250 concise entries written by leaders in the field the volume covers both fundamental knowledge as well as more recent advances in this rapidly changing domain Structured as an easy to use dictionary and extensively cross referenced the Companion offers contributions from philosophy of mind to neuroscience from experimental psychology to clinical findings so reflecting the profoundly interdisciplinary nature of the domain Particular care has been taken to ensure that each of the entries is accessible to the general reader and that the overall volume represents a comprehensive snapshot of the contemporary study of consciousness The result is a unique compendium that will prove indispensable to anyone interested

in consciousness from beginning students wishing to clarify a concept to professional consciousness researchers looking for the best characterization of a particular phenomenon *Facets of Eros* F.J. Smith, E. Eng, 2012-12-06 In an age which is supposedly experiencing a sexual revolution a volume of thoughtful essays on eros is not only not out of place but perhaps is a positive contribution to the understanding of contemporary man It was the conviction of the editors that the scientific view of sexuality as promoted in such valuable studies as those conducted by Masters and Johnson needed considerable supplement and perspective The perspective is here furnished by writers from both Europe and America authors from various fields such as philosophy psychology and even musicology all of whom are united in that their approach to the problem of eros is phenomenologically oriented At first it might well seem strange that musicology would have much to say about eros It is true musicology has been the science of music at least in intent Yet in a larger view of the discipline philosophical and aesthetic problems are also important to it and this particularly if we agree with Enzo Paci that our very culture depends on eros Surely musical culture as pointed out by Kierkegaard is the embodiment of what western civilization has known as sensuality and Mozart's Don Giovanni is its incarnation On the surface it is easier for us to grasp the work of the philosopher in this area and of course one expects the psychologist to deal with sexuality more explicitly than anyone else

The Collected Works of Aron Gurwitsch (1901-1973) Aron Gurwitsch, 2010-08-17 This volume contains Gurwitsch's magnum opus which emphasizes how items in the thematic field are relevant to the theme It is introduced by his student Richard Zaner This volume also includes the posthumous text **Marginal Consciousness** **Romantic Science and the Experience of Self** Martin Halliwell, 2016-03-31 First published in 1999 this engaging interdisciplinary study of romantic science focuses on the work of five influential figures in twentieth century transatlantic intellectual history In this book Martin Halliwell constructs an innovative tradition of romantic science by indicating points of theoretical and historical intersection in the thought of William James American philosopher Otto Rank Austrian psychoanalyst Ludwig Binswanger Swiss psychiatrist Erik Erikson Danish German psychologist and Oliver Sacks British neurologist Beginning with the ferment of intellectual activity in late eighteenth century German Romanticism Halliwell argues that only with William James theory of pragmatism early in the twentieth century did romantic science become a viable counter tradition to strictly empirical science Stimulated by debates over rival models of consciousness and renewed interest in theories of the self Halliwell reveals that in their challenge to Freud's adoption of ideas from nineteenth century natural science these thinkers have enlarged the possibilities of romantic science for bridging the perceived gulf between the arts and sciences *Intimacy and the Anxieties of Cinematic Flesh* Patrick Fuery, 2023-01-26 In a return to Edmund Husserl and Sigmund Freud *Intimacy and the Anxieties of Cinematic Flesh* explores how we can engage these foundational thinkers of phenomenology and psychoanalysis in an original approach to film The idea of the intimate spectator caught up in anxiety is developed to investigate a range of topics central to these critical approaches and cinema including flesh as a disruptive state formed in

the relationships of intimacy and anxiety time and the formation of cinema's enduring objects space and things the sensual the real and the unconscious wildness disruption and resistance and the nightmare reading phantasy across the critical fields Along with Husserl and Freud other key thinkers discussed include Edith Stein Roman Ingarden Maurice Merleau Ponty Mikel Dufrenne in phenomenology Melanie Klein Ernest Jones Julia Kristeva and Rosine Lefort in psychoanalysis Framing these issues and critical approaches is the question how might Husserlian phenomenology and Freudian Lacanian psychoanalysis so often seen as contradistinctive be explored through their potential commonalities rather than differences In addressing such a question this book postulates a new approach to film through this phenomenological psychoanalytic reconceptualization A wide range of films are examined not simply as exemplars but to test the idea that cinema itself can be a version of critical thinking *The Journal of Philosophy* ,1926 Covers topics in philosophy psychology and scientific methods Vols 31 include A Bibliography of philosophy 1933
