miRNAomics and Stress Management in Plants Peerzada Yasir Yousuf,Peerzada Arshid Shabir,Khalid Rehman Hakeem,2024-10-02 Plants being sessile are negatively affected by the biotic and abiotic environmental stresses reducing plant growth productivity and quality to a larger extent Plants have evolved different physiological biochemical and molecular mechanisms to combat these stress conditions to maintain their growth development and productivity Understanding the mechanisms involved in the plant response to stress conditions is the foremost step in the development of stress tolerant plants One of the important adaptations to stress conditions is the precise and fine regulation of gene expression in both time and space Although gene regulation occurs at different levels through different mechanisms the most crucial is at the level of transcription One of the important posttranscriptional gene regulatory mechanisms used by the plants to restore and maintain cellular homeostasis during the stress conditions are microRNAs MicroRNAs a group of approximately 22 nucleotide long non coding RNAs have recently been identified as a new class of regulators governing gene expression at the post transcriptional level MiRNAs can silence genes either by guiding the degradation of the target mRNAs or by repressing the mRNA translation Plant miRNAs have been demonstrated to regulate many genes involved in various developmental processes for example auxin signaling organ polarity radial patterning developmental transitions and secondary metabolism regulation Moreover increasing evidence indicates the role of plant miRNA guided gene regulation in response to biotic and abiotic stresses High throughput sequencing approaches have significantly elucidated the identification and functional characterization of numerous miRNAs in plants Understanding the role and mechanism of action of miRNAs during abiotic and biotic stresses can potentially offer new approaches to improve plant growth and productivity This unique book covers the different aspects of plant microRNAomics including the discovery biogenesis role in different stress conditions and applications of microRNAs in developing stress tolerant plants Chapters cover the updated knowledge in the field of plant microRNA research The book miRNAomics and Stress Management in Plants intends to demonstrate the breadth of research and the significant advances that have been made in understanding the role of miRNAs in the plant development and stress management This comprehensive volume will be of value to plant physiologists plant biochemists geneticists molecular biologists agronomists environmental researchers and graduate and undergraduate students of plant science

Pandey,2020-09-26 The regulation of the phosphorylation dephosphorylation process resulting in cellular switches that monitor normal plant physiology growth and development has immense potential in crop systems With much of the information in the nascent stages coming largely from Arabidopsis and rice particularly the use of cell biology genetic screens biochemical approaches aided by an omics approach should help unravel the detail functional information available about signaling pathways in plants The regulation could be exploited to develop crop varieties better equipped to handle changing environments and enhance agricultural productivity In the post genomic era one of the major challenges is investigation and understanding of multiple genes and gene families regulating a particular physiological and developmental aspect of plant life cycle One of the important physiological processes is regulation of stress response which leads to adaptation or adjustment in response to adverse stimuli With the holistic understanding of the signaling pathways involving phosphatases one gene family or multiple genes or gene families plant biologist can lay a foundation for designing and generating future crops which can withstand the higher degree of environmental stresses Especially abiotic stresses which are the major cause of crop loss throughout the world without losing crop yield and productivity This book incorporates the contributions from leading plant biologists in the field of stress mediated dephosphorylation by phosphatases as an important task to elucidate the aspects of stress signaling by functional genomic approaches **Biotic Stress Management in Rice** Md. Shamim,K.N. Singh,2017-07-06 This book Biotic Stress Management in Rice Molecular Approaches addresses biotic stress of rice and its management through molecular approaches It focuses on the biotechnological aspects of rice with the aim of reducing the fungicide and insecticides and ultimately ensuring safety of rice as a food as well as the environment Rice is an important crop in much of the Asia Pacific

region and there are a number of threats to rice production including fungal viral and bacterial diseases and insect pests both in temperate and tropical countries which can cause the significant economic loss Remarkable efforts are being made by scientists and breeders to raise rice productivity and safety by modifying and manipulating rice plants to survive under different types of stresses The book provides an understanding of the genetic basis of resistance and susceptibility and goes on to present studies directed to understand the host plant interaction in rice that have given rise to specialized breeding programs for resistance to diseases and insect pests In addition to these advancements in molecular breeding marker assisted selection and transgenic approaches open new ways to increase resistance in rice for better production under several biotic stresses This book covers the most recent advancements and research strategies of molecular breeding transgenic approaches and other tools for effective biotic stress management in rice This book should find a prominent place on the shelves of new plant breeders biotechnologists plant pathologists and entomologists working in academic and commercial rice research programs and in the libraries of research establishments
