Animal Drive The Learning Process Volume 1:

Handbook of Learning and Cognitive Processes (Volume 1) W. Estes, 2014-06-20 From the Foreword Is it possible at present to identify a core cluster of theoretical ideas concepts and methods with which everyone working in the area of learning and cognition needs to be familiar Would it be possible to make explicit the relationships that we feel do or must exist among the various subspecialties ranging from conditioning through perceptual learning and memory to psycholinguistics and to present these in a sufficiently organized way to help specialists and non specialists alike in relating particular lines of research to the broader spectrum of activity These questions were posed to a substantial number of investigators who are currently most active in developing the ideas and doing the research Their response constitutes this Handbook First published in 1975 Volume 1 of this Handbook attempts to present an overview of the field and to introduce the principal theoretical and methodological issues that will persistently recur in the expanded treatments of specific research areas that comprise the later volumes Deferring to the current Zeitgeist rather than to chronology they begin with the present state of cognitive psychology then introduce the comparative approach and conclude this volume with a rapid three chapter review of the evolution of ideas from conditioning to information processing Proceedings of the XVth International Ornithological Congress, The Hague, The Netherlands, 30 August - 5 September 1970 Karel Hendrik

Voous, 1973 **Synthesizing Nature-nurture** Gilbert Gottlieb, 2014-09-19 This volume provides a primarily nontechnical summary of experimental and theoretical work conducted over the course of 35 years which resulted in a developmental framework capable of integrating causal influences at the genetic neural behavioral and ecological levels of analysis It describes novel solutions to the nature nurture problem at both the empirical and theoretical levels Following field observations laboratory experiments led to the discovery of the nonobvious prenatal experiential basis of instinctive behavior in two species ground nesting mallard ducklings and hole nesting wood ducklings This work also describes the experiences that lead to the rigid canalization of behavioral development as well as the social and sensory experiences that favor the continuance of flexibility The author also describes in detail a developmental psychobiological systems view that supports a behaviorally and psychologically mediated pathway to evolutionary change in humans and other species Written in a way that is readable to even the nonspecialist the text is accompanied by numerous photographs that illuminate and add personal meaning to the written words Readers will be engaged by the emphasis on the human aspect of the scientific enterprise

Imitation in Animals and Artifacts Christopher L. Nehaniv, Kerstin Dautenhahn, 2002 An interdisciplinary overview of current research on imitation in animals and artifacts **A New Look at New Realism** Eric Charles, 2017-09-08 This volume brings to the attention of contemporary readers a tradition of psychological thought that has received little attention over the last century Psychology's history has been unimaginatively presented as a fight between behaviorists and mentalists A third alternative the New Realism which cuts through that dichotomy has been lost The New Realism was indeed once new

This volume provides a glimpse of how this school of thought attempted to redefine the notion of mental processes including consciousness in psychological theorizing Holt's rejected the nativity of iconoclastic Watsonian behaviorists and thus the New Realism was thoughtful in ways that behaviorist social engineering was not The implications of these innovations in psychological theorizing are traced from the beginning of the twentieth century to the contemporary period The contributors provide these intellectual links along with efforts to look at the relatedness of the human organism and its world At their beginning these ideas are embedded in a reverence for William James's work particularly his later Radical Empiricism In contemporary psychology this legacy has given us the framework of ecological psychology as we know it today and provides the basis for several modern critiques of cognitive psychology The present volume opens the door for future historical inquiries This is an exemplary addition to the series on the History of Psychological Ideas *Thinking in Psychological Science* Jaan Valsiner, 2017-12-02 This book explores the development of ideas in psychology's past It is the initial volume in a series intended to shape such ideas into a valuable resource for the discipline's future Scientists in general are known to ignore their own history considering it to be a graveyard of failures In *Thinking in Psychological Science* selected ideas of key figures in the cognitive comparative and developmental sides of psychology Karl Duncker Karl Bihler Tamara Dembo Zing Young Kuo C Lloyd Morgan Alexander Chamberlain and Arnold Gesell are traced and the social contexts of their ideas are given a collective analysis focusing on the potential of these ideas for the present state of psychology Representing the scientist as hero has become a necessary component when applying for research monies from governmentally controlled funding agencies Yet the reality is just the opposite Science is not just the product of heroes it is the product of many individuals who often search for solutions to basic problems throughout their lifetimes while only a few arrive at breakthroughs Still familiarity with the flow of thought in the efforts to solve the basic problems of humankind is necessary for any understanding of creativity This book analyzes the processes involved in the search for solutions to major theoretical problems of development Kuo Gesell action and cognition Bihler Bunker Dembo and methodology Morgan Ultimately this is an exciting volume that reveals real science in the making *Thinking in Psychological Science* will be of interest to students of the social sciences and intellectual history It is ideal for graduate and upper level undergraduate courses in psychology the sociology of science and cognitive science **Psychological Modeling** Albert Bandura, 2021-05-09 The Classic Edition of this key text highlights seminal work done in the subject of learning by modeling and offers an extensive review of the major theories edited by one of the most influential psychologists of his generation In his introductory essay Bandura identifies the most important controversial issues in the field of observational learning and reviews a large body of research findings before carefully chosen articles written by a team of expert contributors tackle a range of key debates in the field Topics explored include the role of reinforcement play in observational learning the scope of modeling influences the types of people most susceptible to modeling influences and the relative effectiveness of models presented in live action in pictorial presentations

or through verbal description Written in a lively and engaging manner this book will be of interest to all psychology students interested in psychological modeling as well as educators and professionals working with children

The Origins of Language Nobuo Masataka, 2008-08-27 Developments in cognitive science indicate that human and nonhuman primates share a range of behavioral and physiological characteristics that speak to the issue of language origins This volume has three major themes woven throughout the chapters First it is argued that scientists in animal behavior and anthropology need to move beyond theoretical debate to a more empirically focused and comparative approach to language Second those empirical and comparative methods are described revealing underpinnings of language some of which are shared by humans and other primates and others of which are unique to humans New insights are discussed and several hypotheses emerge concerning the evolutionary forces that led to the design of language Third evolutionary challenges that led to adaptive changes in communication over time are considered with an eye toward understanding various constraints that channeled the process

Experimental Psychology Its Scope and Method: Volume V (Psychology Revivals) Joseph Nuttin, Paul Fraisse, Richard Meili, 2014-08-01 First published in English in 1968 Joseph Nuttin contributes the first chapter on Motivation He discusses various aspects of the motivational process Such as incentives conflict social motivation and negative motivation and describes the mechanism of the process The second chapter by Paul Fraisse is on the Emotions Fraisse examines the nature of the emotions both on the behavioural and on the neurophysiological levels and goes on to define and discuss moving situations He shows the different types of expression an emotional reaction may take and discusses the causes of hyper emotionality Richard Meili writes on the Structure of the Personality showing the importance of the idea of trait in the psychology of personality He describes the use of the factorial method in the analysis of personality and gives an account of the beginnings of personality as well as the different parts known as instances of the total organization of personality

The Functions of Language and Cognition Grover J. Whitehurst, Barry J. Zimmerman, 2014-05-10 The Functions of Language and Cognition provides a forum for articulating a functional approach to language and cognition This book discusses the influence of structural approaches to language and thought Organized into 10 chapters this book begins with an overview of a comprehensive alternative treatment of cognitive and linguistic functioning from a social functional perspective This text then discusses some considerations for a theory of skills and of cognitive development in general Other chapters focus on acquisition of perceptual concepts rather than logical verbal or mathematical concepts This book examines as well each of the possible limits in terms of their potential effects on cognitive development and in terms of the evidence regarding their actual effects The final chapter deals with the influence of personal standards and strategies on therapy outcomes This book is a valuable resource for graduate and upper level undergraduate students in developmental psychology clinical psychology cognitive psychology education and rehabilitation
