

the hybrid China roses with different varieties of Chinas and Bourbons, the progeny producing abundance of flowers in the summer and occasionally a few throughout the autumn, thus being termed hybrid perpetuals. Some of our hardiest and best varieties of roses belong to this class, their ease of culture, hardiness, beautiful colors and fragrance combine in making them our most popular garden roses. Baroness Rothschild, Glorie Lyonnaise, J. B. Clark, Marshall P. Wilder, Magna Charta, Mrs. John Laing, Mable Morrison, John Hopper and Paul Meyron are considered amongst our finest varieties in this class.

To be successful in growing roses a sheltered location should be chosen, far enough away from trees, shrubs or buildings so that the roots of the trees or shrubs will not rob them of food and moisture, or the buildings shade them continuously. Roses require a fairly stiff soil and an abundance of food and moisture, and it is useless to attempt to grow them unless attention is given to these details. It is much better to plant them in groups or beds, where the soil has been specially prepared for them, rather than plant them promiscuously over the lawn or garden. If the subsoil is heavy clay it should be dug out to a depth of eighteen inches or two feet and the beds filled in with good rich top soil. Spring is the best time to plant, and in hybrid perpetuals, two or three year old dormant plants should be planted. Care should be taken when planting, to place the graft three or four inches below the surface of the soil and the small shoots should be cut out and the stronger ones cut back to three or four eyes. When the plants have become well established it is important to watch for shoots that may come from below the graft and cut them out or they will rob the plant of nourishment and ultimately kill it. These shoots can be distinguished from the true variety by the great abundance of small thorns which literally cover them. During the first season's growth it is better to pinch off most of the flower buds. This may seem heroic treatment to some growers, but it will greatly increase the strength of the plant, and insure a larger yield of flowers the following year. Roses are gross feeders and a well established plant ought to have frequent applications of fertilizer in some form during the growing season. Liquid fertilizer, bone meal or a good covering of well-rotted manure will keep them in good growing condition. The tips of the young growths are often infested with green or black

Board Of Horticulture Report 1921
