Architecture-Based Design of Multi-Agent Systems Danny Weyns, 2010-06-01. Multi agent systems are claimed to be especially suited to the development of software systems that are decentralized, can deal flexibly with dynamic conditions and are open to system components that come and go. This is why they are used in domains such as manufacturing control, automated vehicles and e-commerce markets. Danny Weyns' book is organized according to the postulate that developing multi agent systems is 95% software engineering and 5% multi agent systems theory. He presents a software engineering approach for multi agent systems that is heavily based on software architecture with, for example, tailored patterns such as situated agent, virtual environment and selective perception, and on middleware for distributed coordination with programming abstractions such as views and roles. Next, he shows the feasibility and applicability of this approach with the development of an automated transportation system consisting of a number of automatic guided vehicles transporting loads in an industrial setting. Weyns puts the development of multi agent systems into a larger perspective with traditional software engineering approaches. With this, he opens up opportunities to exploit the body of knowledge developed in the multi agent systems community to tackle some of the difficult challenges of modern day software systems such as decentralized control, location awareness, self-adaptation and large scale. Thus, his book is of interest for both researchers and industrial software engineers who develop applications in areas such as distributed control systems and mobile applications where such requirements are of crucial importance.

Environments for Multi-Agent Systems III Danny Weyns, 2007-02-28. This book constitutes the thoroughly refereed post-proceedings of the Third International Workshop on Environments for Multiagent Systems (E4MAS 2006) held in Hakodate, Japan, in May 2006 as an associated event of AAMAS 2006, the 5th International Joint Conference on Autonomous Agents and Multiagent Systems. The 15 revised papers presented were carefully reviewed and selected from the lectures given at the workshop, completed by a number of invited papers of prominent researchers active in the domain. The papers are organized in topical sections on models, architecture and design, mediated interaction.
