Advanced Computer System Design:

Advanced Computer Architecture Richard Y. Kain, 1996 This book presents a coherent approach to computer system design that encompasses many if not most of the design problems and solutions options Covers not only the basic tricks and techniques but also the relationships between software and hardware levels of system implementation and operation

Principles of Computer System Design Jerome H. Saltzer, M. Frans Kaashoek, 2009-05-21 Principles of Computer System Design is the first textbook to take a principles based approach to the computer system design It identifies examines and illustrates fundamental concepts in computer system design that are common across operating systems networks database systems distributed systems programming languages software engineering security fault tolerance and architecture Through carefully analyzed case studies from each of these disciplines it demonstrates how to apply these concepts to tackle practical system design problems To support the focus on design the text identifies and explains abstractions that have proven successful in practice such as remote procedure call client service organization file systems data integrity consistency and authenticated messages Most computer systems are built using a handful of such abstractions The text describes how these abstractions are implemented demonstrates how they are used in different systems and prepares the reader to apply them in future designs The book is recommended for junior and senior undergraduate students in Operating Systems Distributed Systems Distributed Operating Systems and or Computer Systems Design courses and professional computer systems designers Concepts of computer system design guided by fundamental principles Cross cutting approach that identifies abstractions common to networking operating systems transaction systems distributed systems architecture and software engineering Case studies that make the abstractions real naming DNS and the URL file systems the UNIX file system clients and services NFS virtualization virtual machines scheduling disk arms security TLS Numerous pseudocode fragments that provide concrete examples of abstract concepts Extensive support The authors and MIT OpenCourseWare provide on line free of charge open educational resources including additional chapters course syllabi board layouts and slides lecture videos and an archive of lecture schedules class assignments and design projects

Software System Design Methods Josef K. Skwirzynski, 2012-12-06 In this volume we present the full proceedings of a NATO Advanced Study Institute ASI on the theme of the challenge of advanced computing technology to system design methods This is in fact the second ASI organised by myself and my colleagues in the field of systems reliability the first was about Electronic Systems Effectiveness and Life Cycle Costing and the proceedings were published by the same publisher in 1983 as Series F Computer and System Sciences No 3 The first part of the present proceedings concentrates on the development of low fault and fault tolerant software In organising this session I was greatly helped by Mr John Musa and Professor V R Basili The latter and Or R W Selby open our text with their interesting approach to the problem of data collection and of observation sampling for statistical analysis of software development software testing strategies and error analysis The problem of clean room software development is also

considered Next Professor B Randell discusses recursively structured fault tolerant distributed computer systems and bases his approach on a UNIX system example His aim is to establish that a distributed system should be functionally equivalent to an individual computing system Or L F Pau considers knowledge engineering techniques applied to fault detection test generation and maintenance of software This is illustrated by a variety of examples such as electronic failure detection control system testing analysis of intermittent failures false alarm reduction and others Following this Mr M *Department of Transportation and Related Agencies Appropriations for 1984* United States.
