Bicarbonate Chloride And Proton Transport Systems:

Bicarbonate, Chloride, and Proton Transport Systems John H. Durham, Marcos A. Hardy, 1989 Knowledge of the mechanisms and regulation of chloride bicarbonate and proton transport across cells and their membranes has become crucial to our understanding of many physiologic functions at both the cellular and systemic level Cell pH and volume regulation and gastric renal ocular and airway function are examples of processes that depend on the control and proper operation of anion and proton translocating mechanisms Osmotic and metabolic functions of many plant and fungal cells also depend on these processes and such systems have mechanisms in common with those found in animal cells It has become evident that regulation of anion and proton transport at both cell and tissue levels participates in the physiologic homeostasis of the living state and that dysfunction in these processes can result in significant pathologic conditions There have been significant strides in knowledge afforded by developments for ion detecting dyes signal channel measurements and the application of genetic and biochemical approaches to the study of anion and proton transport systems Major conference topics include Primary and conductive chloride transport Mechanisms of chloride cotransport Molecular and cellular aspects of proton transport Primary electrogenic and conductive proton transport Regulation of chloride proton transport and intracellular pH and Regulation of chloride bicarbonate and proton transport Ion transport symposia Acid base balance edc

Epithelial Transport Physiology George A. Gerencser, 2010-03-10 Biological cell membranes regulate the transfer of matter and information between the intracellular and extracellular compartments as basic survival and maintenance functions for an organism This volume contains a series of reviews that are concerned with how epithelial plasma membranes regulate the transport of solutes between the intracellular and extracellular compartments of a cell This book is also an attempt to analyze the molecular basis for the movement of various solutes across an epithelial cell membrane This volume is devoted to a diversity of epithelial transport mechanisms in representative cell membranes of a variety of living things The first section of the book Chapters 1-6 focuses on mechanisms of solute transport in epithelia of invertebrates The last section which comprises ten chapters Chapters 7-16 deals with solute transporters in epithelial cell membranes of vertebrates It is hoped that with this particular ordering the reader can glean a telescopic view of the evolutionary history of the various epithelial solute transporters

Advances in Comparative and Environmental Physiology G.A. Gerencser, 2012-12-06 Biological cell membranes regulate the transfer of matter and information between the intracellular and extracellular compartments as basic survival and maintenance functions for an organism This volume contains a series of reviews that are concerned with how biological plasma membranes regulate the transport of chloride between the intracellular and extracellular compartments of a cell This book is also an attempt to analyze the molecular basis for the movement of chloride across a cell membrane This volume is devoted to a diversity of electrogenic chloride transport mechanisms in representative cell membranes of all living things The first section of the book Chaps 1-4 focuses on mechanisms of primary active chloride transport i.e. photon or ATP driven while the second section Chaps 5-6 centers on secondary active chloride transporters symport and antiport in both plant and animal plasma membranes The last section which comprises seven chapters Chaps 7-13 deals with chloride channels in cell membranes of prokaryocytes and eukaryocytes of most every phylum It is hoped that with this particular ordering the reader can glean a telescopic view of the evolutionary history of the various electrogenic chloride transporters **Analytical Use of Fluorescent Probes in Oncology** Elli Kohen, Joseph G. Hirschberg, 2012-12-06 Fluorescence is a very powerful tool for work at the frontier of cell biology photobiology and bioinstrumentation The stated aim of the workshop was to highlight the significance of fluorescence work for the understanding of cell and tissue physiology physiopathology and pharmacology particularly in terms of the analytical use of fluorescent probes in oncology In the organization of the workshop a multidisciplinary approach was selected The purpose of the Advanced Research Workshop ARW was to bring together researchers in the various disciplines of tissue optics imaging microspectrofluorometry and state of the art probes in order to explore the full benefits that can be derived in biomedicine through the convergence of these approaches When applied to in vivo and in situ studies fluorescence and related optical methods enable us to explore within tissues cells and organelles

photon effects previously understood only in solution photochemistry Processes which can be studied at the molecular level by photophysics photochemistry and physical chemistry can be evaluated in living tissue by fluorescence spectroscopy and imaging at the intracellular level in terms of structure and function Thus fluorescence adds a new dimension to cell biology and physiology This approach is now supported by a full and versatile rapidly growing armamentarium of new selective probes for organelles enzymes cations cytoskeleton and metabolic control *Cell Physiology Sourcebook* Nicholas

Transport in Epithelia R. Greger, 2012-12-06 After the pioneering studies by Ussing and co workers studies of epithelial Na⁺ transport have come a long way The first phase of the phenomenological description of the cell as a black box has been followed by studies of cellular mechanisms the interplay of the different transport components and the mechanisms of regulation A broad spectrum of methods has been applied to many epithelia in a variety of species For the individual epithelia transport schemes have been proposed and at this point I think it is appropriate to take a pause and search for elements common to

several epithelia This aspect triggered the publication of this book and in fact the various chapters emphasize that the functional components expressed in the various epithelia are not in finite in number but they occur in epithelia which are separated in evolution by several hundred million years The authors come both from the field of veterinary and human physiology as well as from biology In my opinion the close contacts and collaborations between physiologists and biologists have been essential for the progress in this field I wish to thank all authors for their contributions and I hope that the reader will appreciate this collection of up to date reviews on epithelia in nonvertebrates and vertebrates
