Circular Economy Opportunities and Pathways for Manufacturers Henrik Hvid Jensen, 2025-03-11

In today's rapidly evolving manufacturing landscape, the future competitiveness for manufacturers hinges on three interlinked paradigms:

1. **Circular Economy Models for Zero Waste Product Lifecycles**: The shift from traditional linear models to circular ones is increasingly crucial. Circular strategies extend product lifecycles, optimize resource use, and open new revenue streams, ultimately bolstering resilience, competitiveness, and customer relationships.
2. **Sustainable Manufacturing Through Decarbonization**: As global awareness around sustainability grows, the push toward decarbonized manufacturing processes is no longer optional. Such an approach minimizes environmental impact while aligning with international sustainability goals.
3. **Digital Enablement for Paradigm Transformation**: Digitization serves as the lynchpin in realizing cleaner manufacturing and circular economy objectives. Tools like the Digital Product Passport (DPP) empower manufacturers to achieve transparency, encourage collaboration, and create unmatched business value, expediting the transition to sustainable and circular manufacturing.

One of the most pressing challenges for manufacturers today is achieving the transition to cleaner and circular business models in a financially viable way. This book delves deeply into the business opportunities circularity presents and the pivotal role of digital solutions in enabling a smooth and cost-effective transition. It emphasizes how digitization can address economic feasibility concerns while driving operational efficiency and sustainability. By breaking down these critical elements, the book provides actionable insights and frameworks serving as a practical guide for manufacturers striving to align economic priorities with environmental and operational demands, ensuring long-term competitiveness and resilience.

Sustainable Finance and the Global Health Crisis Pasquale Marcello Falcone, Edgardo Sica, 2023-08-01

The speed with which the various economies recover from the Covid-19 pandemic will significantly determine the economic pressure placed on the environment in the medium to long term. Furthermore, the pandemic has highlighted the strong interrelations between natural and societal systems, with societal resilience depending on a resilient environmental support system. In this context, the book argues that the pandemic represents a wake-up call for financial systems to be better prepared for the climate crisis and social risk, and has provided a stimulus to scale down the reliance of the global economy on fossil fuels. The first part of the book provides a

deep and creative discussion between leading international researchers and experts on the policy options and financial instruments which can help to catalyze the green finance transition in the post Covid 19 era The contributions show that sustainable finance is emerging as a powerful tool to advance the transition towards a more environmentally and socially sustainable economic model Instruments such as sovereign green bonds green securities and other sustainability related securities can play a significant role in the post Covid 19 world to fund economic stimulus and to lead the way to new and more sustainable future The second part of the book supports the debate by highlighting a number of selected case studies on financing transitions in different regional contexts including Africa Asia Europe and Latin America The book marks a significant contribution to the literature on environmental economics and finance climate change and sustainability transitions Chapter 12 of this book is freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4 0 license

Recycling Institutions Letícia Antunes Nogueira,Håkan T. Sandersen,Brigt Dale,2025-08-18 This open access book investigates the phenomenon of recycling

institutions in urban mining using social sciences lenses on the empirical context of waste from electrical and electronic equipment WEEE landfills as a potential resource pool and the recycling of building materials in Norway There is a dual meaning to the term recycling institutions and this book has the ambition to explore both The first refers to institutions that recycle i e the institutional infrastructure that facilitates material recycling From household attitudes and practices to the laws and regulations that govern waste management there is an institutional apparatus that recycling relies upon which gains increased importance as the sustainability agenda develops The second meaning refers to the recycling of institutions in the sense that the institutional setup itself is being repurposed and transformed This more metaphorical meaning points to the way in which emerging societal ambitions such as the circular economy stretch and bend existing institutions by imposing new functions upon them Institutions are conservative and backward looking and tend to resist rapid and radical changes that are incompatible with the ideas and practices they are built on So whereas the first is about designing new institutions for circularity the second is about modifying and recycling existing institutions to meet the challenges circularity may entail The central premise is that relevant supportive and well functioning institutional environments are crucial in the transition to a greener society that encourages industries businesses households and citizens to act in more sustainable ways and it identifies both possibilities and obstacles in the emergence of institutions that support urban mining This book integrates a range of disciplines in the social sciences to investigate the phenomenon of recycling institutions By examining the case of urban mining in Norway with a special focus on how existing structures developed for waste management can be repurposed to facilitate this new function the book provides insight into a scenario where material sourcing from anthropogenic sources is dissociated from natural resource scarcity and is instead linked to political ambitions and an attempt to stay at the forefront of sustainability transitions
