Advanced Practice Nursing Yoonmee Joo, J. V. Gatewood, Mary Anne M. Israel, Kelly Wong McGrath, 2024-05-28 Collins
Saxe's Clinical Guidelines for Advanced Practice Nursing Fourth Edition is an accessible and practical reference designed to support nurses and students in daily clinical decision making. Written by an interdisciplinary team of APRNs, it emphasizes collaboration for optimal patient-centered care and follows a lifespan approach with content divided into four clinical areas: Pediatrics, Sexual Reproductive Health, Obstetrics, and Adult Gerontology. To support varying advanced practice roles, the authors utilize the SOAP Subjective Objective Assessment Plan format for an organized and accessible teaching and learning experience. The updated and revised Fourth Edition emphasizes diversity, equity, and inclusion (DEI) and the importance of understanding the unique needs of diverse patient populations. This text considers the ways that racism, homophobia, transphobia, xenophobia, sexism, ageism, and other forms of discrimination impact our patient populations and how nurses can work as allies to ensure quality patient-centered care. Provides clinical practice guidelines across the lifespan with an emphasis on diversity, equity, and inclusion. Well organized for quick access to common patient presentations with a focus on health equity, maintenance, and promotion. Features an interdisciplinary and team-based approach to clinical practice that includes chapters written in collaboration with certified nurse midwives, clinical nurse specialists, nurse practitioners, nutritionists, pharmacists, and physicians. Every new print copy is packaged with Navigate Essentials Access to unlock the complete eBook and a series of Interactive Case Studies covering obstetric, pediatric, and adult populations. Instructor resources include a Test Bank, Core Advanced Practice Nursing Courses, Health Assessment 2025, 750 pages. *Directory of Published Proceedings*, 1998. Assessing Interventions Fred Tudiver, 1992-08-20. Research methods for primary care often require adaptation of methodologies that were developed for other health care fields. To help meet the distinct needs of researchers in primary care, *Assessing Interventions* takes a comprehensive look at specific research methods that can be used to assess interventions in primary care settings successfully. This information-packed volume is divided into four parts and covers such issues as assessing interventions in primary care and two major assessment strategies: quantitative methodologies, the traditional approach, and qualitative methodologies, some of which are new to primary care. It also explores topics such as principles and approaches to measures of self-report, assessing a smoking cessation intervention, and assessing primary health care delivery. The final section presents a panel discussion that outlines possible future directions in particular the challenge for the primary care discipline to define its own foci of research activities. *Assessing Interventions* will be useful for both new and experienced researchers, whether practitioner-oriented or professional. Writers and reviewers of grant applications and scientific papers will also find this volume invaluable. The book clearly attains its goals. Research by generalists for generalists and others is early in its evolution. Books like this help those who are just beginning to explore the field find support and encouragement to foster critical self-examination of what we do rather than having our practice determined by those who are not generalists. I recommend it to all, not just researchers but to those who reflect on what they
