Advances in Electronics and Electron Physics, 1976-07-29 **Advances in Electronics and Electron Physics** Peter W. Hawkes, 1983-11 Underwater Research E.A. Drew, 2013-07-19 Underwater Research is primarily a review of problems in underwater viewing and hearing and acoustics The chapters in this book are papers collated from the symposia of the Underwater Association This book explores the need for the further study of the physiological and psychological reactions of divers The book also concludes that diving is still the best way in studying the benthic ecology and sunken wrecks and cities The text is divided into 25 detailed chapters Most of the topics in the text address the common problems encountered by divers such as in hearing and viewing Specifically problems in diver communication depth estimation color distinction are some of the topics covered Other chapters deal with the psychological reactions such as anxiety narcosis and visual attention Also some chapters tackle solutions and experiments for the improvement of diving techniques and equipment This reference is helpful to divers students and scientists involved in marine and environmental science *Astrophysics Optical and Infrared*, 1974-09-05 *Astrophysics Optical and Infrared*

Atmospheric Ultraviolet Remote Sensing Robert E. Huffman, 1992-10-19 This book is an introduction to the use of the ultraviolet for remote sensing of the Earth's atmosphere It covers the Earth's UV radiative environment experimental techniques and current applications it is my intention to provide the information needed to make a first approximation concerning the use of the ultraviolet and to provide access through the literature for a more thorough study Contains recent UV applications not previously available in book form such as ozone auroral images and ionospheric sensing Features broad coverage of fundamentals of atmospheric geophysics with values for fluxes cross sections and radiances Covers techniques that illustrate principles of measurements with typical values Contains numerous references to original literature *High Speed Photography* P.J. Rolls, 2012-12-06 The combination of color schlieren with high speed flash techniques has proved to be a valuable tool for investigating high speed transient events Fully two dimensional refractive index information can be obtained The resolution on 35 mm film was sharp enough to allow 50 cm by 75 cm color enlargements REFERENCES 1 Barnes N F Jour of the SMPTE Oct 1953 Vol 61 487 511 2 Cords P R S P I E Jour February March 1968 Vol 6 3 North R J NPL Aero 266 1954 4 Settles G S Image Technology June July 1972 5 Smith L L and J R Waddell 9th Congress of High Speed Photography Denver Colo August 1970 Paper 86 6 Stong C L and G S Settles Scientific American May 1971 Vol 225 No 5 7 Stong C L and Vandiver J K Scientific American August 1974 Vol 231 No 2 105 DISCUSSION MY R J North UK Pould the author care to comment on possible ambiguities of interpretation due to the omnidirectional sensitivity of the colour filter system used I notice that in two of his pictures density gradients in directions at right angles are shown by the same colour transitions MY J Kim Vandiver The photographs presented were not composed to yield accurate determination of the direction of density gradients Development of Proximity and Electrostatically Focused Diodes for UV Measurements from Sounding Rockets

S. L. Russak, 1979 This report describes the development of two types of imaging digicon detectors for ultraviolet measurements from rockets The detectors consist of sealed tubes with a semitransparent photocathode of cesium iodide or cesium telluride Photoelectrons accelerated to about 25 kV are detected by a silicon diode array One tube has a ten by ten square array with proximity focussing and is used to obtain spatial intensity measurements The other tube has a one by thirty six linear array that is placed in the focal plane of a spectrograph The problems associated with construction of these devices are discussed Laboratory test results demonstrating the use of these tubes are given Author *Instrumentation Papers*, 1978 **Instrumentation for Astronomy with Large Optical Telescopes** C.M. Humphries, 2012-12-06 Interest world

wide in the provision of new observational astronomical facilities in the form of ground based optical telescopes of large aperture has never been higher than exists at present The benefits to be gained from increased aperture size however are only utilised effectively if efficient instrumentation is also available There have been significant improvements recently in this area particularly in detector technology and data handling as well as in optical design so that systems which are currently being developed have the capability of being vastly more powerful in terms of the efficient use of photons than those which existed only 5 years ago The rationale for the decision by Commission 9 of the International Astronomical Union to hold IAU Colloquium 67 therefore was to obtain reports on these developments with the emphasis placed upon overall efficiency of the complete observational system from telescope aperture right through to detector output A fitting venue for the meeting was the site of the 6 metre BTA Bolshoi Azimuth Telescope at Zelenchukskaya in the Caucasus mountains USSR The BTA is operated by the Special Astrophysical Observatory located at Nizhnij Arkhyz a few kilometres from the telescope itself
