Bone Morphogenetic Protein And Collagen: An Advances In Tissue Banking Specialist Publication Glyn O Phillips, 2004-01-16 What are bone morphogenetic proteins BMPs and how can they be used in orthopaedic practice Ever since Urist proposed in 1976 that protein factors from cortical bone appeared to modulate bone healing in animals there has been a search for these mysterious osteoinductive components Now that their structure has been elucidated they have been purified and cloned and are now available for the improvement of bone healing The best source of BMPs is demineralised bone This bone allograft is used to achieve greater osteoinductive capacity But are the actions of procurement processing demineralisation and sterilisation harmful to the BMPs Unless the BMPs can be assayed neither their clinical nor their scientific effectiveness can be appraised All these aspects are logically and scientifically described in this volume In addition there is a review of the biochemistry of one of the two main components of bone namely collagen This subject is itself a confusing but rapidly growing field This comprehensive review describes the procedures for building up bone in vivo and in vitro Bone Morphogenetic Protein and Collagen answers most of the questions of orthopaedic surgeons and tissue bankers on how BMPs can be produced and used to their maximum effectiveness *Bone Biology and Healing* Glyn O. Phillips, 2003 This book describes succinctly the factors which affect the incorporation of massive and morsellised allografts after transplantation Unless special precautions are taken massive allografts when implanted can undergo stress fatigue due to the limited incorporation at the graft host interface Immunological and cell signalling growth factors can be shown to greatly influence the behaviour of the graft The bone biological processes are illustrated in terms of demineralised bone which can initiate bone induction due to the protection and availability of the original bone morphogenetic protein The main message is that transplantation without consideration of the underlying biological healing processes can reduce the effectiveness of the procedure *Clinical Applications of Bone Allografts and Substitutes* Glyn O. Phillips, 2005 Although bone allografts were first utilized by McEwen in orthopaedic surgery in 1881 progress since then has been sporadic With the growth of tissue banks and the greater availability of safe and sterile bone grafts the pace has now quickened in 2004 more than one million such grafts were used in the USA alone However the practice generally remained a cottage industry well into the latter part of the 20th century This volume provides an international expert evaluation of the current use of bone bone substitutes and related allografts and describes up to date practices and clinical results in particular procedures It will provide a ready reference for readers wishing to carry out an initial survey of the subject *Bone Morphogenetic Protein and Collagen* Glyn O. Phillips, 2003 What are bone morphogenetic proteins BMPs and how can they be used in orthopaedic practice Ever since Urist proposed in 1976 that protein factors from cortical bone appeared to modulate bone healing in animals there has been a search for these mysterious osteoinductive components Now that their structure has been elucidated they have been purified and cloned and are now available for the improvement of bone healing The best source of BMPs is demineralised
