The clinical use of bone densitometry is increasing exponentially as more professional societies have endorsements and guidelines on the application of bone densitometry in the assessment and management of osteoporosis. The recent endorsement of population screening by the US Preventive Services Task Force (USPSTF) has now provided governmental validation to this technology, whose proper use Dr Bonnick has pioneered. In a new chapter, Dr Bonnick compares the similarities and differences in the recent guidelines from the USPSTF and the National Osteoporosis Foundation, American Association of Clinical Endocrinologists, American College of Obstetrics and Gynecology, and the North American Menopause Society.

Dermatology Skills for Primary Care Daniel J. Trozak, Dan J. Tennenhouse, 2007-10-28 The diagnosis and treatment of common dermatologic problems is a critical area of skill and knowledge for primary care physicians. According to the US Department of Health and Human Services, patients present to their physicians a skin rash as their chief concern for nearly 12 million office visits each year. In 73% of these office visits, patients see their internist, family physician, or pediatrician. In this respect, astonishingly, primary care clinicians see far more skin disease in their offices than dermatologists. *Dermatology Skills for Primary Care: An Illustrated Guide* advances the targeted skill and knowledge base of primary care physicians as well as the collaboration between dermatologists and primary care physicians by its wise choice of organization, scope, and approach. *Dermatology Skills for Primary Care: An Illustrated Guide* by Drs. Trozak, Tennenhouse, and Russell is an important addition to the dermatology literature because it has been written collaboratively by a skilled dermatologist and two excellent academic family physicians. As such, the book superbly targets the depth and scope of needs of primary care practitioners in the field of dermatology.
