Latest Trends in Engineering and Technology Sajjan Singh, Sarabpreet Kaur, 2024-06-28 We are very pleased to introduce the proceedings of the International Conference on Latest Trends in Engineering and Technology ICLTET 2023. Papers were well presented in the conference in the fields of Artificial Intelligence, Machine Learning, IOT, Communication Networks, Mechanical Engineering, Civil Engineering, Nano Material Research, Business Management, and many more to arouse a high level of interest. The presented papers maintained the high promise suggested by the written abstracts and the program was chaired in a professional and efficient way by the session chair who were selected for their expertise in the subject. The number of delegates was also highly gratifying, showing the high level of interest in the subject. This Proceeding provides the permanent record of what was presented. They indicate the state of development at the time of writing of all aspects of this important topic and will be invaluable to all academicians and researchers in the field for that reason. Finally, it is appropriate that we record our thanks to our fellow members of the Technical Organizing Committee for encouraging participation from those areas. We are also indebted to those who served as session chair and reviewers without their support the conference could not have been the success that it was. We also acknowledge the authors themselves without whose expert input there would have been no conference. Their efforts made a great contribution to its success. **New**

Approaches for Sustainable & Resilient Processes and Products of Social Housing Development in the Arabian Gulf Countries Khaled Galal Ahmed, Mohamed H. Elnabawi, Mahgoub, Lindita Bande, Martin Scoppa, 2023-10-16 Social housing has been a forefront research topic especially from its economic and socio-cultural factors. The nature of social housing in the Arabian Gulf Countries has been distinctive in its approach with usually generous areas and urban sprawl designs. Recently, most of these Arabian Gulf Countries have gone through profound transformation in their social and housing paradigms influenced by their sustainability adopted agendas. Still, scholarly documentation and analysis of the processes and products of these transformed paradigms are largely missing or at least fragmented. So there is a desperate need to boost research work in this field as related to each city/country in this region with largely expected mutual effects that these experiences might have on each other and on the global debate about sustainable and resilient social housing as a whole. **World's Transition Toward A Green Economy: Achieving The United Nations' Sustainable Development**

Goals And Promoting The Role Of Green Finance Xugang Yu, Mario Tettamanti, Cristiano Rizzi, 2023-10-04 This book treats different themes which are intrinsically linked and of extreme significance for the entire global community such as the necessity to cut emissions and transit toward a more sustainable and green economy. The content extends to the urgency to shape a new multilateralism and reinforce cooperation to achieve global goods where the environment comes first to the green finance which will play a fundamental role for the green transition, paying particular attention to the United Nations 2030 Agenda for Sustainable Development. A particular emphasis is given to the so-called Dual Circulation Strategy (DCS).

which is presently becoming the priority not only for China but also for the rest of the global community. Due to the uncertainties caused by the pandemic and other external factors, China has substituted GDP growth with the so-called six guarantees, which represent the six fundamental aspects of the economy and society that, according to the central government, must receive priority attention and protection in economic policy to ensure economic recovery. China also introduced the concept of an ecological civilization through green low-carbon economic development. One of the targets is to achieve carbon neutrality before 2060, though the rest of the global community and, in particular, the European Union with its Green Deal and the US with its renewed climate policies, are pushing to reach this objective in 2050. In order to grant all these developments, green finance plays a fundamental role for the success of this green transition. Therefore, a substantial part of this book explores the many aspects surrounding this theme. Due to renewables playing a very important role in the green transition, the final part of this book explores investment opportunities related to the development of these alternative sources of energy.

Renewable Electricity - Generation Technologies Great Britain: Parliament: House of Commons: Innovation, Universities, Science and Skills Committee, 2008. The European Union's EU common Energy Policy commits the EU to generating 20 per cent of total energy consumption from renewables by 2020. The European Commission proposed national renewable energy targets for each Member State, and it was suggested that 15 per cent of UK energy be derived from renewables by 2020.

Wave, Wind, and Current Power Generation Victor M. Lyatkher, Ziaur Rahman, 2022-03-03. WAVE AND CURRENT POWER GENERATION. Written by two well-known and respected engineers, this exciting new volume is the most up-to-date and comprehensive text on power generation from waves and water currents available today to engineers, scientists, and students, also covering the latest advances in wind power generation. As the world turns further and further away from fossil fuel energy sources, unconventional and renewable sources of energy such as power generation from water sources and wind energy are becoming more and more important. Hydropower has been around for decades, but this book suggests new methods that are more cost-effective and less intrusive to the environment for creating power sources from rivers, the tides, and other sources of water. Written by two experts in the field, it also covers wind energy and how it can be more efficiently harnessed. This groundbreaking new volume deals with modern problems of using wind energy, namely jet currents in the atmosphere and the energy of water flows of rivers, ocean, and sea currents, including those caused by tides. Wind and water-based energy sources form an essential part of the renewable energy solution. The engineering measures discussed in this book prove, for example, that by reducing the rate of dissipation of atmospheric surface low-level currents by only one percent, it is possible to provide all of humanity with energy at rates twice the per capita consumption of the wealthiest countries. Whether for the veteran engineer or the engineering student, this book is a must-have for any library. *Wave, Wind, and Current Power Generation* is one of the first books available on wave and current power generation, containing information for engineers to use for solving day-to-day problems. Assists engineers in

rapidly analyzing problems and finding effective design methods and select mechanical specifications Provides methods and proven fundamentals of process design for practical application Helps achieve optimum operations and process conditions and shows how to translate design fundamentals into mechanical equipment specifications Covers not just wave and current power generation but also has a section on wind power generation and a comprehensive overview of renewable energy in the world today

The New Atlas of Planet Management Norman Myers, Jennifer Kent, 2005 The editors present a graphics driven state of the planet survey of natural systems human impact on those systems and how to manage them for a sustainable future
