Linear-Fractional Programming Theory, Methods, Applications and Software E.B. Bajalinov, 2013-12-01 This is a book on Linear Fractional Programming here and in what follows we will refer to it as LFP The field of LFP largely developed by Hungarian mathematician B Martos and his associates in the 1960 s is concerned with problems of optimization LFP problems deal with determining the best possible allocation of available resources to meet certain specifications In particular they may deal with situations where a number of resources such as people materials machines and land are available and are to be combined to yield several products In linear fractional programming the goal is to determine a permissible allocation of resources that will maximize or minimize some specific showing such as profit gained per unit of cost or cost of unit of product produced etc Strictly speaking linear fractional programming is a special case of the broader field of Mathematical Programming LFP deals with that class of mathematical programming problems in which the relations among the variables are linear the constraint relations i.e. the restrictions must be in linear form and the function to be optimized i.e. the objective function must be a ratio of two linear functions

Rethinking Cultural-Historical Theory Manolis Dafermos, 2018-05-17 This book is an exploration of science in the making It offers readers the opportunity to critically reflect on the process of development of Vygotsky's research program from the perspective of dialectics focusing on the dramatic process of building and rebuilding cultural historical theory Vygotsky's creative and dramatic journey is no less important than the concrete results of his research An epistemological and historical investigation of the formulation of cultural historical theory sheds light on the process of knowledge production and reveals hidden dimensions of creativity in science

Application of Systemic-Structural Activity Theory to Design and Training Gregory Z. Bedny, 2014-12-18 This book offers analytical methods for studying human work in ergonomics and psychology that are similar to ones utilized by the engineering sciences SSAT offers not only new qualitative but also formalized and quantitative methods of analysis This book will describe quantitative methods of task complexity and reliability assessment application

Self-Regulation

in Activity Theory Gregory Z. Bedny, Waldemar Karwowski, Inna Bedny, 2018-10-03 Every complex human machine system includes a computer as a critically important means of work. However, an operator's interaction with a computerized system cannot be reduced to only performing computer-based tasks. Today, human computer interaction (HCI) is not limited to trained software users. People of all ages use all different kinds of gadget.

Philosophical Thought in Russia in the Second Half of the Twentieth Century Vladislav Lektorsky, Marina F. Bykova, 2019-01-10 Philosophical Thought in Russia in the Second Half of the 20th Century is the first book of its kind that offers a systematic overview of an often misrepresented period in Russia's philosophy. Focusing on philosophical ideas produced during the late 1950s to early 1990s, it reconstructs the development of genuine philosophical thought in the Soviet period and introduces those non-dogmatic Russian thinkers who saw in philosophy a means of reforming social and intellectual life. Covering such areas of philosophical inquiry as philosophy of science, philosophical anthropology, the history of philosophy, activity approach, as well as communication and dialogue studies, the volume presents and thoroughly discusses central topics and concepts developed by Soviet thinkers in that particular field. Written by a team of internationally recognized scholars from Russia and abroad, it examines the work of well-known Soviet philosophers such as Mikhail Bakhtin, Evald Ilyenkov, and Merab Mamardashvili, as well as those important figures such as Vladimir Bibler, Alexander Zinoviev, Yuri Lotman, Georgy Shchedrovitsky, Genrich Batishchev, Sergey Rubinstein, and others who have often been overlooked. By introducing and examining original philosophical ideas that evolved in the Soviet period, the book confirms that not all Soviet philosophy was dogmatic and tied to orthodox Marxism and the ideology of Marxism-Leninism. It shows Russian philosophical development of the Soviet period in a new light as a philosophy defined by a genuine discourse of exploration and intellectual progress rather than stagnation and dogmatism. In addition to providing the historical and cultural background that explains the development of the 20th-century Russian philosophy, the book also puts the discussed ideas and theories in the context of contemporary philosophical discussions, showing their relevance to nowadays debates in Western philosophy. With short biographies of key thinkers, an extensive current bibliography, and a detailed chronology of Soviet philosophy, this research resource provides a new understanding of the Soviet period and its intellectual legacy 100 years after the Russian Revolution.

Acting with Technology Victor Kaptelinin, Bonnie A. Nardi, 2009-08-07 A systematic presentation of activity theory, its application to interaction design, and an argument for the development of activity theory as a basis for understanding how people interact with technology. Activity theory holds that the human mind is the product of our interaction with people and artifacts in the context of everyday activity. Acting with Technology makes the case for activity theory as a basis for understanding our relationship with technology. Victor Kaptelinin and Bonnie Nardi describe activity theory's principles, history, relationship to other theoretical approaches, and application to the analysis and design of technologies. The book provides the first systematic entry-level introduction to the major principles of activity theory. It describes the accumulating body of work in interaction design.

informed by activity theory drawing on work from an international community of scholars and designers Kaptelinin and Nardi examine the notion of the object of activity describe its use in an empirical study and discuss key debates in the development of activity theory Finally they outline current and future issues in activity theory providing a comparative analysis of the theory and its leading theoretical competitors within interaction design distributed cognition actor network theory and phenomenologically inspired approaches

Contemporary Approaches to Activity Theory: Interdisciplinary Perspectives on Human Behavior Hansson, Thomas, 2014-10-31 The human mind is best understood when it is studied in the context of meaningful and goal oriented interactions between individuals and their environment These internal and external activities help to shape the human consciousness and experience Contemporary Approaches to Activity Theory Interdisciplinary Perspectives on Human Behavior is an opportunity to study the complex socially oriented contexts of humans by considering the entirety of our environments cultures motivations signs and tools and various activities Highlighting strategies in design educational and work practice and methodological analysis this book is an essential reference source for academicians researchers and students interested in gaining a thorough understanding of the interaction between humans and their environments

Activity Systems Analysis Methods Lisa C. Yamagata-Lynch, 2010-07-15 In the last two decades there has been growing interest in pursuing theoretical paradigms that capture complex learning situations Cultural Historical Activity Theory CHAT is one of several theoretical frameworks that became very popular among educational researchers because it conceptualizes individuals and their environment as a holistic unit of analysis It assumes a non dualistic ontology and acknowledges the complexities involved in human activity in natural settings Recently reputable journals such as the American Psychologist Educational Psychologist and Educational Researcher that are targeted for a wide range of audience have included articles on CHAT In many of such articles CHAT has been referred to as social constructivism sociocultural theory or activity theory Activity systems analysis is one of the popular methods among CHAT researchers for mapping complex human interactions from qualitative data However understanding the methods involved in activity systems analysis is a challenging task for many researchers This difficulty derives from several reasons First the original texts of CHAT are in Russian and there have been numerous authors who report on the difficulties of reconciling translation problems of the works of original authors such as Vygotsky and Leontiev Second in North America activity systems analysis has deviated from the Russian scholars intentions and Engeström's original work using the triangle model to identify tensions to overcome and bring about sociopolitical change in participant practices Third to this date there are numerous publications on the theoretical background of activity theory and studies reporting the results of using activity systems analysis for unpacking qualitative data sets but there have been no methodological publications on how researchers engage in activity systems analysis Thus there is a dearth of literature in both book and journal publications that guide researchers on the methodological issues involving activity systems analysis

Perspectives

on Activity Theory Yrjö Engeström, Reijo Miettinen, Raija-Leena Punamäki-Gitai, 1999-01-13 Activity theory is an interdisciplinary approach to human sciences that originates in the cultural historical psychology school initiated by Vygotsky, Leont'ev and Luria. It takes the object-oriented artifact-mediated collective activity system as its unit of analysis, thus bridging the gulf between the individual subject and the societal structure. This 1999 volume includes 26 chapters on activity theory by authors from ten countries. In Part I of the book, central theoretical issues are discussed from different points of view. Some topics addressed in this part are epistemology, methodology, and the relationship between biological and cultural factors. Part II is devoted to the acquisition and development of language. This part includes a chapter that analyzes writing activity in Japanese classrooms and a case study of literacy skills of a man with cerebral palsy. Part III contains chapters on play, learning, and education, and Part IV addresses the meaning of technology and the development of work activities. The final part covers issues of therapy and addiction.
