Base Bleed First International Symposium On Special Topics In Chemical Propulsion Athens 1988:

Base Bleed Kenneth K. Kuo, James N. Fleming, 1991 Includes papers presented at a symposium which represent the state of the art in the development of base bleed projectiles and related research and are from recognized experts in the field The papers have undergone a thorough review process

Improved Power-on, Base Drag Methodology for the Aeroprediction Code Frankie Gale Moore, Thomas C. Hymer, 2001 Improved methods for base pressure prediction under base bleed and rocket motor on conditions have been developed The base bleed method makes several refinements to the method developed by Danberg at the Army Research Laboratory in Aberdeen Maryland The improved rocket motor on base pressure prediction improves upon the method developed at the Army Missile Command in Huntsville Alabama by Brazzel and some of his colleagues The major refinement to the base bleed method of Danberg was to estimate the power off value of base pressure empirically based on an extensive data base as opposed to using computational fluid dynamics codes to predict this term The major modifications to the power on base pressure prediction method of Brazzel was to extend its range of applicability to high values of thrust coefficient to Mach numbers less than 1.5 and to different afterbody shapes In comparing the improved methods for power on base drag prediction to experiment it was seen that both methods gave reasonable agreement to most experimental data bases However more validation is needed particularly for the combined effects of angle of attack fins and power on conditions

The 2002 Version of the Aeroprediction Code Frankie Gale Moore, Thomas C. Hymer, 2002 A new version of the aeroprediction code APC the AP02 has been developed to address the requirements arising from advanced weapon concepts The AP02 was formed by adding significant new technology and several productivity improvements to the

previous version of the APC the AP98 New technology added included 6 and 8 fin aerodynamics improved nonlinear aerodynamics improved pitch damping predictions improved power on base drag estimates base bleed effect on base drag estimation improved axial force of nonaxisymmetric bodies and trailing edge flap capability Other improvements and productivity enhancements include an aerodynamic smoother ballistic and three degree of freedom simulation modules as well as refinements for the pre and post processor for inputs and outputs of the AP02 Comparison of the predicted aerodynamics of the AP02 to AP98 and experimental data showed the AP02 to be slightly better than the AP98 in most cases that both codes would handle However due to the additional new technology incorporated into the AP02 many new options are available in the AP02 that are not available in the AP98 Therefore the AP02 is more robust and on average is slightly more accurate than the AP98 in predicting aerodynamics of weapons **AIAA 90-2056 - AIAA 90-2089** ,1990
