Planner Remote Jobs:

The Planner's Guide to Natural Resource Conservation: Adrian X. Esparza, Guy McPherson, 2009-06-12 Much of the country's recent population growth is situated in exurban areas. By many accounts, exurbanization has become the dominant pattern of land development in the country and there is no indication it will slow in the foreseeable future. Theobald 2005, Brown et al 2005, Glennon and Kretser 2005. By definition, exurban development takes place beyond the metropolitan fringe, often in rural and remote areas. The development of new exurban communities is a growing trend, especially in the West. In this case, developers and homebuilders seek large tracts of land, up to thousands of acres, in rural areas, typically within 50 miles of a large city, where they plan entire communities consisting of commercial, retail, and residential land uses. Recreational amenities such as golf courses and hiking, biking trails are often included in these master-planned developments. Our philosophy is reflected in the book's two objectives. First, we seek to document the extent and impacts of exurban development across the country. At issue is demonstrating why planners and the public at large should be concerned about exurbanization. We will demonstrate that even though exurbanization favors amenity-rich regions, it affects all areas of the country through the loss of agricultural and grazing lands, impacts to watersheds, and land modification. A summary of environmental impacts is presented, including the loss of wildlands and agricultural productivity, land modification, soil erosion, impacts to terrestrial hydrologic systems, the loss of biodiversity, nonnative and endangered species, and other topics. Our second aim is to provide readers from diverse non-scientific backgrounds with a working knowledge of how and why exurbanization impacts environmental systems. This is accomplished by working closely to ensure contributors follow a specific outline for each chapter. First, contributors will spell out fundamental concepts, principles, and processes that apply to their area of expertise, e.g., riparian areas. Contributors will move beyond a cursory understanding of ecological processes without overwhelming readers with the dense material found typically in specialized texts. For this reason, visuals and other support materials will be integral to each chapter. We have chosen contributors carefully based on their record as research scientists and acumen as educators. Second, once the mechanics have been laid out, authors will explain how and why land development in nearby areas influences ecosystems. Issues of interdependency, modification, and adaptation, spatial scale, and varying time horizons will be featured. Third, contributors will weigh in on the pros and cons of various land development schemes. Fourth, authors will share their thinking on the merits of conservation devices such as wildlife corridors, open space requirements, and watershed management districts. Finally, each chapter will conclude by identifying pitfalls to avoid and highlighting best practices that will mitigate environmental problems or avoid them altogether. In sum, after completing each chapter, readers should have a firm grasp of relevant concepts and processes, an understanding of current research, and know how to apply science to land use decisions.

Computer Aided Architectural Design Futures 2005 Bob Martens, Andre Brown, 2005-07-14 MARTENS Bob and BROWN Andre Co conference Chairs CAAD Futures 2005 Computer Aided

Architectural Design is a particularly dynamic field that is developing through the actions of architects software developers researchers technologists users and society alike CAAD tools in the architectural office are no longer prominent outsiders but have become ubiquitous tools for all professionals in the design disciplines At the same time techniques and tools from other fields and uses are entering the field of architectural design This is exemplified by the tendency to speak of Information and Communication Technology as a field in which CAAD is embedded Exciting new combinations are possible for those who are firmly grounded in an understanding of architectural design and who have a clear vision of the potential use of ICT CAAD Futures 2005 called for innovative and original papers in the field of Computer Aided Architectural Design that present rigorous high quality research and development work Papers should point towards the future but be based on a thorough understanding of the past and present

Powerful Geography Michael Solem, Richard G. Boehm, Joann Zadrozny, 2024-03-25 This book presents the evolution of the Powerful Geography approach to teaching and learning in the United States and how the approach can be adapted and implemented in other countries Powerful Geography acknowledges the remarkable diversity that exists in classrooms the wide ranging interests of modern students and the desire of these students to translate dynamic subject matter into useful information and concepts a process that is consistent with modern educational theory For Powerful Geography to work in secondary and postsecondary education teachers and university professors must adapt and teach geography as a critical training where individual students see opportunities to apply geography content skills and

technology to real world problems that they care about This book challenges geography educators at all levels to strengthen their applied curriculum in order to help students prepare for jobs and careers in broad areas such as climate change migration environmental protection natural resources energy development and use transport planning supply chain logistics global trade national security and infrastructure
