Rheophysics Philippe Coussot, 2014-06-17 This book presents a unified view of the physicochemical origin of the mechanical behaviour of gases simple solids and liquids suspensions polymers emulsions foams and granular materials along with techniques for measuring that behaviour Besides molecular materials in all their classical gaseous solid or liquid states we deal daily with a number of other materials made of coarser elements such as polymers cells grains bubbles and droplets They take on the familiar appearance of paints inks cements muds foams emulsions toothpastes gels etc These materials exhibit complex structures and sometimes amazing types of mechanical behaviour often intermediate between those of a simple liquid and a simple solid From a practical standpoint the aim is to analyze their internal evolution aging restructuring phase separation etc then to formulate these materials in accordance with the desired properties and thereby devise new materials With that aim in mind it is crucial to understand how these materials deform or

flow depending on the interactions and structures formed by the elements they contain This book is intended for students as well as more advanced researchers in mechanics physics chemistry and biology The mathematical formalism is reduced in order to focus on physical explanations *Proceedings of the Symposium on Lithium Batteries* Subbarao Surampudi, Richard A. Introduction to Dynamic Light Scattering by Macromolecules Kenneth S Schmitz, 2012-12-02 An Introduction to Dynamic Light Scattering by Macromolecules provides an introduction to the basic concepts of dynamic light scattering DLS with an emphasis on the interpretation of DLS data It presents the appropriate equations used to interpret DLS data The material is presented in order of increasing complexity of the systems under examination ranging from dilute solutions of noninteracting particles to concentrated multicomponent solutions of strongly interacting particles and gels Problems are presented at the end of each chapter to emphasize these concepts Since a major emphasis of this textbook is the interpretation of DLS data obtained by polarized light scattering studies on macromolecular solutions the results of complementary experimental techniques are also presented in order to gain insight into the dynamics of these systems This textbook is intended for 1 advanced undergraduate students and graduate students in the chemical physical and biological sciences 2 scientists who might wish to apply DLS methods to systems of interest to them but who have no formal training in the field of DLS and 3 those who are simply curious as to the type of information that might be obtained from DLS techniques
