

PHYSICAL MECHANISM OF CONVECTION

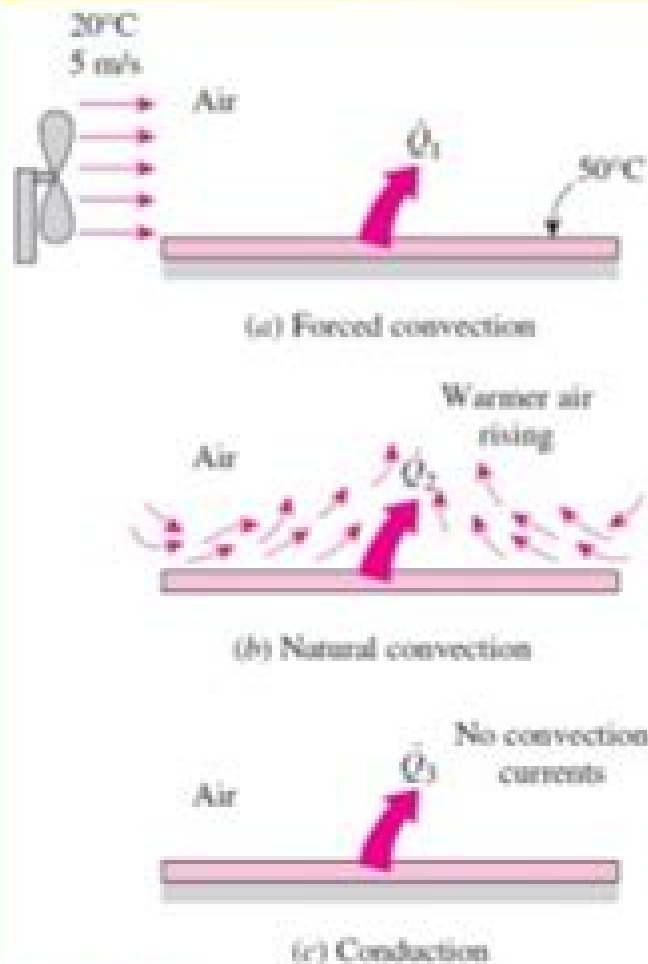

FIGURE 6-1

Heat transfer from a hot surface to the surrounding fluid by convection and conduction.

Conduction and convection both require the presence of a material medium but convection requires fluid motion.

Convection involves fluid motion as well as heat conduction.

Heat transfer through a solid is always by conduction.

Heat transfer through a fluid is by convection in the presence of bulk fluid motion and by conduction in the absence of it.

Therefore, conduction in a fluid can be viewed as the limiting case of convection, corresponding to the case of quiescent fluid.
