Atlas Of Vitreous Biomicroscopy:

Atlas of Vitreous Biomicroscopy Charles L. Schepens, Clement L. Trempe, Masataka Takahashi (M.D.), 1999 Japanese ophthalmologists describe an approach to diagnosis based on slit lamp biomicroscopy of the vitreous After an overview of the history and the instruments they discuss various pathologic conditions of the vitreous describing and illustrating mostly in color important clinical aspects Those conditions are degenerative changes of the vitreous body opacities in the vitreous cavity vascular diseases uveitis macular diseases retinal breaks and tumors Annotation copyrighted by Book News Inc Portland OR

Vitreous J. Sebag, 2014-10-01 The vitreous body long has been the most mysterious of all ocular structures owing perhaps to its seeming simplicity There have been few concerted sustained efforts to unravel the mysteries of how vitreous is composed and what role it plays in normal physiology as well as pathology Over the years however many studies have produced important findings concerning vitreous biochemistry structure physiology and pathobiology Published on the 25th anniversary of Sebag's first book on Vitreous this second installment is nearly five times longer than its predecessor reflecting how much has been learned in the past quarter century This well constructed compendium not only addresses the most current scientific knowledge but also reviews clinical perspectives in a manner that lends richness to the scope of the book Written by 90 authors this book has 56 chapters organized into 7 sections Biochemistry Anatomy Development and Aging Pathology Pathobiology Physiology and Pharmacotherapy Posterior Vitreo Retinal Surgery Peripheral Vitreo Retinal Surgery and Pharmacologic Vitreolysis With a foreword by Coleman Lincoff and an introduction by Wallace Foulds Sebag's latest tome on vitreous is destined to be the authoritative text for years to come

Clinical Atlas of Peripheral Retinal Disorders Keith M. Zinn, 2012-12-06 A comprehensive understanding of diseases of the peripheral retina is essential to the general ophthalmologist as well as to the vitreoretinal surgeon Expertise in direct ophthalmoscopy scleral depression and contact lens biomicroscopy serves as a basis for observing the peripheral retina These observations are then recorded on fundus drawing paper and the Tolentino vitreo retinal chart This orderly sequence of skills allows the ophthalmic surgeon to objectively diagnose and evaluate specific peripheral retinal disorders and plan for their therapeutic management The Clinical Atlas of Peripheral Retinal Disorders is a compilation of fundus paintings by David A Tilden based on our observations of a large number of patients over the past 15 years The atlas is organized along functional and anatomical lines After a brief introduction to the clinical anatomy of the peripheral retina the appearance of the fundus as a function of skin color and aging is presented Many of the diseases of the peripheral retina can be divided into trophic nutritional tractional and a combination of trophic plus tractional etiologies This classification system although somewhat simplistic appears adequate for our present level of understanding of the pathogenetic mechanisms of these disorders Undoubtedly once the molecular biology of these conditions is elucidated through future research the classification will be revised In addition there are other conditions that affect the peripheral retina that do not fit the proposed classification system and are covered under
