

Atmospheric Processes

The oceans play an important role in exchanging and transporting heat and moisture in the atmosphere.

Most of the water vapor in the atmosphere comes from the oceans.

Most of the precipitation falling over land finds its way back to oceans.

About two-thirds returns to the atmosphere via the water cycle.

Practically all of the energy that reaches the earth comes from the sun. Intercepted first by the atmosphere, a small part is directly absorbed, particularly by certain gases such as ozone and water vapor. Some energy is also reflected back to space by clouds and the earth's surface.
