source featuring the latest scholarly research on an operational framework for decision support for local and regional authorities to aid in sustainable energy planning Including extensive coverage on a broad range of topics and perspectives such as emission trends energy balance and climate change this book is ideally designed for academicians researchers and students seeking current research on the development of regional sustainable energy plans **Geocomputation, Sustainability and Environmental Planning** Beniamino Murgante, Giuseppe Borruso, Alessandra Lapucci, 2011-03-30 The experience developed by Ian McHarg represents the first attempt to base environmental planning on more objective methods In particular he supposed that the real world can be considered as a layer cake and each layer represents a sectoral analysis This metaphor represents the fundamental of overlay mapping At the beginning these principles have been applied only by hand just considering the degree of darkness produced by layer transparency as a negative impact In the following years this craftmade approach has been adopted for data organization in Geographical Information Systems producing analyses with a high level of quality and rigour Nowadays great part of studies in environmental planning field have been developed using GIS The next step relative to the simple use of geographic information in supporting environmental planning is the adoption of spatial simulation models which can predict the evolution of phenomena As the use of spatial information has definitely improved the quality of data sets on which basing decision making process the use of Geostatistics spatial simulation and more generally geocomputation methods allows the possibility of basing the decision making process on predicted future scenarios It is very strange that a discipline such as planning which programs the territory for the future years in great part of cases is not based on simulation models Sectoral analyses often based on surveys are not enough to highlight dynamics of an area Better knowing urban and environmental changes occurred in the past it is possible to provide better simulations to predict possible tendencies The aim of this book is to provide an overview of the main methods and techniques adopted in the field of environmental geocomputation in order to produce a more sustainable development *Planning Sustainable Cities* Spiro Pollalis, 2016-05-20 Planning Sustainable Cities An infrastructure based approach provides an analytical framework for urban sustainability focusing on the services and performance of infrastructure systems The book approaches infrastructure as a series of systems that function in synergy and are directly linked with urban planning This method streamlines and guides the planning process while still highlighting detail each infrastructure system is decoded in four system levels The levels organize the processes highlight connections between entities and decode the high level planning and decision making process affecting infrastructure For each system level strategic objectives of planning are determined The objectives correspond to the five focus areas of the Zofnass program Quality of life Natural World Climate and Risk Resource Allocation Leadership Developed through the Zofnass Program at the Harvard Graduate School of Design this approach integrates the key infrastructure systems of Energy Landscape Transportation Waste Water Information and Food and explores their synergies through land use planning engineering economics and policy The size and complexity of infrastructure systems

means that multiple stakeholders facing their own challenges and agendas are involved in planning this book creates a common collaborative platform between public authorities planners and engineers It is an essential resource for those seeking Envision Sustainability Professionals accreditation Planning and Management of Solar Power from Space Panagiotis Kosmopoulos,2023-08-31 Planning and Management of Solar Power from Space presents for the first time a holistic solar energy management and planning solution using Earth observation data and methodologies giving an alternative view for precise electricity production and handling Including examples of exploiting this solution by transmission and distribution system operators and solar power plants of both Photovoltaic PV and Concentrated Solar Power CSP systems this book showcases real implementations and benefits of Earth observation technology thus providing solar sector professionals an approach for continuously monitoring solar energy production and atmospheric parameter forecasts in high spatial and temporal resolution By guiding readers in tracking solar energy availability in relation to time horizons and forecasting this book addresses potential challenges in research and development since this technology and the extensive use of such data and services enable accurate solar energy estimations and forecasts useful mainly in energy production control and grid stability Includes state of the art solar energy nowcasting technology based on radiative transfer model simulations machine learning computer vision and Earth Observation input data Presents real examples of planning and management of solar power from space including exploitation strategies from transmission and distribution system operators and solar energy plants production optimization Features spectral added value products and on the fly calculations for operational solutions **Planning for a sustainable future** Great Britain: Department for Communities and Local
