A Self-Instructional Programed Manual

A practical and comprehensive course of instruction combining modern programed instruction techniques with a conversational,

© **MW Books**

As a companion volume to *Direct Current Circuits and Measurements*, this book maintains the same high standards and makes full use of the advantages inherent in properly constructed programed material.

The coverage is comprehensive and the emphasis is once again on practical application.

Mathematical computations require only a knowledge of algebra and the ability to read trigonometric tables. The solution to problems is handled in a step-by-step manner until the reader attains mastery. The problem-solving exercises are extensive and solutions are given.

Each unit of instruction is about 5 to 15 frames in length and is designed to meet a specific objective. At the end of each unit the reader is given a test frame to which he must respond without help. Only when the correct response is given should he continue to the next frame.

To facilitate review and to permit rapid progress through any familiar sections, the reader can resort to a process called "looping" in which he uses the test frames only. If an error is made, it is only necessary to review the 5 to 15 frames leading up to the test frame.
