12th Annual Conference on Algorithmic Learning Theory ALT 2001 which was held in Washington DC USA during November 25-28, 2001. The main objective of the conference is to provide an interdisciplinary forum for the discussion of theoretical foundations of machine learning as well as their relevance to practical applications. The conference was co-located with the Fourth International Conference on Discovery Science DS 2001. The volume includes 21 contributed papers. These papers were selected by the program committee from 42 submissions based on clarity, significance and relevance to theory and practice of machine learning. Additionally, the volume contains the invited talks of ALT 2001 presented by Dana Angluin of Yale University, USA; Paul R. Cohen of the University of Massachusetts at Amherst, USA; and the joint invited talk for ALT 2001 and DS 2001 presented by Setsuo Arikawa of Kyushu University, Japan. Furthermore, this volume includes abstracts of the invited talks for DS 2001 presented by Lindley Darden and Ben Shneiderman, both of the University of Maryland at College Park, USA. The complete versions of these papers are published in the DS 2001 proceedings *Lecture Notes in Artificial Intelligence*, Vol. 2226. Optimizing Hyperparameters for Machine Learning Algorithms in Production Jonathan

Krauß, 2022-04-13. Machine learning (ML) offers the potential to train data-based models and therefore to extract knowledge from data. Due to an increase in networking and digitalization, data and consequently the application of ML are growing in production. The creation of ML models includes several tasks that need to be conducted within data integration, data preparation, modeling, and deployment. One key design decision in this context is the selection of the hyperparameters of an ML algorithm, regardless of whether this task is conducted manually by a data scientist or automatically by an AutoML system. Therefore, data scientists and AutoML systems rely on hyperparameter optimization (HPO) techniques, algorithms that automatically identify good hyperparameters for ML algorithms. The selection of the HPO technique is of great relevance since it can improve the final performance of an ML model by up to 62 % and reduce its errors by up to 95 % compared to computing with default values. As the selection of the HPO technique depends on different domain-specific influences, it becomes more and more popular to use decision support systems to facilitate this selection. Since no approach exists which covers the requirements from the production domain, the main research question of this thesis was: Can a decision support system be developed that supports the selecting of HPO techniques in the production domain? **Algorithmic Learning**

The conference was co-located with the 13th International Conference on Discovery Science DS 2010 and with the Machine Learning Summer School which was held just before ALT 2010. The technical program of ALT 2010 contained 26 papers selected from 44 submissions and five invited talks. The invited talks were presented in joint sessions of both conferences.
